

**CENPA Antibody (Center) Blocking peptide**  
**Synthetic peptide**  
**Catalog # BP13843c**

**Specification**

---

**CENPA Antibody (Center) Blocking peptide - Product Information**

Primary Accession [P49450](#)

**CENPA Antibody (Center) Blocking peptide - Additional Information**

**Gene ID 1058**

**Other Names**

Histone H3-like centromeric protein A, Centromere autoantigen A, Centromere protein A, CENP-A, CENPA

**Target/Specificity**

The synthetic peptide sequence used to generate the antibody AP13843c was selected from the Center region of CENPA. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

**Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

**Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

**Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

**CENPA Antibody (Center) Blocking peptide - Protein Information**

**Name CENPA**

**Function**

Histone H3-like nucleosomal protein that is specifically found in centromeric nucleosomes (PubMed:<a href="http://www.uniprot.org/citations/7962047" target="\_blank">7962047</a>, PubMed:<a href="http://www.uniprot.org/citations/9024683" target="\_blank">9024683</a>, PubMed:<a href="http://www.uniprot.org/citations/11756469" target="\_blank">11756469</a>, PubMed:<a href="http://www.uniprot.org/citations/14667408" target="\_blank">14667408</a>, PubMed:<a href="http://www.uniprot.org/citations/15702419" target="\_blank">15702419</a>, PubMed:<a href="http://www.uniprot.org/citations/15475964" target="\_blank">15475964</a>, PubMed:<a href="http://www.uniprot.org/citations/15282608" target="\_blank">15282608</a>, PubMed:<a href="http://www.uniprot.org/citations/17651496" target="\_blank">17651496</a>, PubMed:<a href="http://www.uniprot.org/citations/19114591" target="\_blank">19114591</a>, PubMed:<a href="http://www.uniprot.org/citations/27499292" target="\_blank">27499292</a>, PubMed:<a href="http://www.uniprot.org/citations/20739937" target="\_blank">20739937</a>).

Replaces conventional H3 in the nucleosome core of centromeric chromatin that serves as an assembly site for the inner kinetochore (PubMed:<a href="<http://www.uniprot.org/citations/18072184>">18072184</a>). The presence of CENPA subtly modifies the nucleosome structure and the way DNA is wrapped around the nucleosome and gives rise to protruding DNA ends that are less well- ordered and rigid compared to nucleosomes containing histone H3 (PubMed:<a href="<http://www.uniprot.org/citations/27499292>">27499292</a>, PubMed:<a href="<http://www.uniprot.org/citations/26878239>">26878239</a>). May serve as an epigenetic mark that propagates centromere identity through replication and cell division (PubMed:<a href="http://www.uniprot.org/citations/15475964" target="\_blank">15475964</a>, PubMed:<a href="http://www.uniprot.org/citations/15282608" target="\_blank">15282608</a>, PubMed:<a href="http://www.uniprot.org/citations/26878239" target="\_blank">26878239</a>, PubMed:<a href="http://www.uniprot.org/citations/20739937" target="\_blank">20739937</a>, PubMed:<a href="http://www.uniprot.org/citations/21478274" target="\_blank">21478274</a>). Required for recruitment and assembly of kinetochore proteins, and as a consequence required for progress through mitosis, chromosome segregation and cytokinesis (PubMed:<a href="http://www.uniprot.org/citations/11756469" target="\_blank">11756469</a>, PubMed:<a href="http://www.uniprot.org/citations/14667408" target="\_blank">14667408</a>, PubMed:<a href="http://www.uniprot.org/citations/18072184" target="\_blank">18072184</a>, PubMed:<a href="http://www.uniprot.org/citations/23818633" target="\_blank">23818633</a>, PubMed:<a href="http://www.uniprot.org/citations/25556658" target="\_blank">25556658</a>, PubMed:<a href="http://www.uniprot.org/citations/27499292" target="\_blank">27499292</a>).

### **Cellular Location**

Nucleus. Chromosome, centromere. Note=Localizes exclusively to sites of kinetochore assembly in centromeres. Occupies a compact domain at the inner kinetochore plate stretching across 2 thirds of the length of the constriction but encompassing only one third of the constriction width and height (PubMed:19114591) Phosphorylation at Ser-68 during early mitosis abolishes association with chromatin and centromeres and results in dispersed nuclear location (PubMed:25556658).

### **CENPA Antibody (Center) Blocking peptide - Protocols**

Provided below are standard protocols that you may find useful for product applications.

### **CENPA Antibody (Center) Blocking peptide - Background**

Centromeres are the differentiated chromosomal domainsthat specify the mitotic behavior of chromosomes. CENPA encodes a centromere protein which contains a histone H3 related histone folddomain that is required for targeting to the centromere. CENPA isproposed to be a component of a modified nucleosome ornucleosome-like structure in which it replaces 1 or both copies ofconventional histone H3 in the (H3-H4)2 tetrameric core of thenucleosome particle. Alternative splicing results in multipletranscript variants encoding distinct isoforms. [provided byRefSeq].
