

CDH15 Antibody (N-term) Blocking Peptide

Synthetic peptide Catalog # BP1435a

Specification

CDH15 Antibody (N-term) Blocking Peptide - Product Information

Primary Accession

P55291

CDH15 Antibody (N-term) Blocking Peptide - Additional Information

Gene ID 1013

Other Names

Cadherin-15, Cadherin-14, Muscle cadherin, M-cadherin, CDH15, CDH14, CDH3

Target/Specificity

The synthetic peptide sequence used to generate the antibody AP1435a was selected from the N-term region of human CDH15. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

CDH15 Antibody (N-term) Blocking Peptide - Protein Information

Name CDH15

Synonyms CDH14, CDH3

Function

Cadherins are calcium-dependent cell adhesion proteins. They preferentially interact with themselves in a homophilic manner in connecting cells; cadherins may thus contribute to the sorting of heterogeneous cell types. M-cadherin is part of the myogenic program and may provide a trigger for terminal muscle differentiation.

Cellular Location

Cell membrane; Single-pass type I membrane protein

Tissue Location

Expressed in the brain and cerebellum.

CDH15 Antibody (N-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

CDH15 Antibody (N-term) Blocking Peptide - Background

CDH15 is a member of the cadherin superfamily of calcium-dependent intercellular adhesion glycoproteins. Cadherins consist of an extracellular domain containing 5 cadherin domains, a transmembrane region, and a conserved cytoplasmic domain. Transcripts from this particular cadherin are expressed in myoblasts and upregulated in myotubule-forming cells. This protein is thought to be essential for the control of morphogenetic processes, specifically myogenesis, and may provide a trigger for terminal muscle cell differentiation.
