

**Cyclin-D1 Antibody (Center) Blocking peptide**  
**Synthetic peptide**  
**Catalog # BP14436c**

**Specification**

---

**Cyclin-D1 Antibody (Center) Blocking peptide - Product Information**

Primary Accession [P24385](#)

**Cyclin-D1 Antibody (Center) Blocking peptide - Additional Information**

**Gene ID 595**

**Other Names**

G1/S-specific cyclin-D1, B-cell lymphoma 1 protein, BCL-1, BCL-1 oncogene, PRAD1 oncogene, CCND1, BCL1, PRAD1

**Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

**Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

**Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

**Cyclin-D1 Antibody (Center) Blocking peptide - Protein Information**

Name CCND1 {ECO:0000303|PubMed:8204893, ECO:0000312|HGNC:HGNC:1582}

**Function**

Regulatory component of the cyclin D1-CDK4 (DC) complex that phosphorylates and inhibits members of the retinoblastoma (RB) protein family including RB1 and regulates the cell-cycle during G(1)/S transition (PubMed:<a href="http://www.uniprot.org/citations/1833066" target="\_blank">1833066</a>, PubMed:<a href="http://www.uniprot.org/citations/1827756" target="\_blank">1827756</a>, PubMed:<a href="http://www.uniprot.org/citations/8114739" target="\_blank">8114739</a>, PubMed:<a href="http://www.uniprot.org/citations/8302605" target="\_blank">8302605</a>, PubMed:<a href="http://www.uniprot.org/citations/19412162" target="\_blank">19412162</a>, PubMed:<a href="http://www.uniprot.org/citations/33854235" target="\_blank">33854235</a>). Phosphorylation of RB1 allows dissociation of the transcription factor E2F from the RB/E2F complex and the subsequent transcription of E2F target genes which are responsible for the progression through the G(1) phase (PubMed:<a href="http://www.uniprot.org/citations/1833066" target="\_blank">1833066</a>, PubMed:<a href="http://www.uniprot.org/citations/1827756" target="\_blank">1827756</a>, PubMed:<a href="http://www.uniprot.org/citations/8114739" target="\_blank">8114739</a>, PubMed:<a href="http://www.uniprot.org/citations/8302605" target="\_blank">8302605</a>, PubMed:<a href="http://www.uniprot.org/citations/19412162" target="\_blank">19412162</a>). Hypophosphorylates RB1 in early G(1) phase (PubMed:<a

href="http://www.uniprot.org/citations/1833066" target="\_blank">>1833066</a>, PubMed:<a href="http://www.uniprot.org/citations/1827756" target="\_blank">>1827756</a>, PubMed:<a href="http://www.uniprot.org/citations/8114739" target="\_blank">>8114739</a>, PubMed:<a href="http://www.uniprot.org/citations/8302605" target="\_blank">>8302605</a>, PubMed:<a href="http://www.uniprot.org/citations/19412162" target="\_blank">>19412162</a>). Cyclin D-CDK4 complexes are major integrators of various mitogenenic and antimitogenic signals (PubMed:<a href="http://www.uniprot.org/citations/1833066" target="\_blank">>1833066</a>, PubMed:<a href="http://www.uniprot.org/citations/1827756" target="\_blank">>1827756</a>, PubMed:<a href="http://www.uniprot.org/citations/8302605" target="\_blank">>8302605</a>, PubMed:<a href="http://www.uniprot.org/citations/19412162" target="\_blank">>19412162</a>). Also a substrate for SMAD3, phosphorylating SMAD3 in a cell-cycle-dependent manner and repressing its transcriptional activity (PubMed:<a href="http://www.uniprot.org/citations/15241418" target="\_blank">>15241418</a>). Component of the ternary complex, cyclin D1/CDK4/CDKN1B, required for nuclear translocation and activity of the cyclin D-CDK4 complex (PubMed:<a href="http://www.uniprot.org/citations/9106657" target="\_blank">>9106657</a>). Exhibits transcriptional corepressor activity with INSM1 on the NEUROD1 and INS promoters in a cell cycle-independent manner (PubMed:<a href="http://www.uniprot.org/citations/16569215" target="\_blank">>16569215</a>, PubMed:<a href="http://www.uniprot.org/citations/18417529" target="\_blank">>18417529</a>).

### **Cellular Location**

Nucleus. Cytoplasm Nucleus membrane. Note=Cyclin D-CDK4 complexes accumulate at the nuclear membrane and are then translocated to the nucleus through interaction with KIP/CIP family members

### **Cyclin-D1 Antibody (Center) Blocking peptide - Protocols**

Provided below are standard protocols that you may find useful for product applications.

### **Cyclin-D1 Antibody (Center) Blocking peptide - Background**

The protein encoded by this gene belongs to the highlyconserved cyclin family, whose members are characterized by adramatic periodicity in protein abundance throughout the cellcycle. Cyclins function as regulators of CDK kinases. Differentcyclins exhibit distinct expression and degradation patterns whichcontribute to the temporal coordination of each mitotic event. Thiscyclin forms a complex with and functions as a regulatory subunitof CDK4 or CDK6, whose activity is required for cell cycle G1/Stransition. This protein has been shown to interact with tumorsuppressor protein Rb and the expression of this gene is regulatedpositively by Rb. Mutations, amplification and overexpression ofthis gene, which alters cell cycle progression, are observedfrequently in a variety of tumors and may contribute totumorigenesis.
