

FDPS Antibody (N-term) Blocking Peptide

Synthetic peptide Catalog # BP14864a

Specification

FDPS Antibody (N-term) Blocking Peptide - Product Information

Primary Accession

P14324

FDPS Antibody (N-term) Blocking Peptide - Additional Information

Gene ID 2224

Other Names

Farnesyl pyrophosphate synthase, FPP synthase, FPS, (2E, 6E)-farnesyl diphosphate synthase, Dimethylallyltranstransferase, Farnesyl diphosphate synthase, Geranyltranstransferase, FDPS, FPS, KIAA1293

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

FDPS Antibody (N-term) Blocking Peptide - Protein Information

Name FDPS (HGNC:3631)

Synonyms FPS, KIAA1293

Function

Key enzyme in isoprenoid biosynthesis which catalyzes the formation of farnesyl diphosphate (FPP), a precursor for several classes of essential metabolites including sterols, dolichols, carotenoids, and ubiquinones. FPP also serves as substrate for protein farnesylation and geranylgeranylation. Catalyzes the sequential condensation of isopentenyl pyrophosphate with the allylic pyrophosphates, dimethylallyl pyrophosphate, and then with the resultant geranylpyrophosphate to the ultimate product farnesyl pyrophosphate.

Cellular Location

Cytoplasm.

FDPS Antibody (N-term) Blocking Peptide - Background

This gene encodes an enzyme that catalyzes the production of geranyl pyrophosphate and farnesyl pyrophosphate fromisopentenyl pyrophosphate and dimethylallyl pyrophosphate. Theresulting product, farnesyl pyrophosphate, is a key intermediate incholesterol and sterol biosynthesis, a substrate for proteinfarnesylation and geranylgeranylation, and a ligand or agonist forcertain hormone receptors and growth receptors. Drugs that inhibitthis enzyme prevent the post-translational modifications of smallGTPases and have been used to treat diseases related to boneresorption. Multiple pseudogenes have been found on chromosomes 1,7, 14, 15, 21 and X. Multiple transcript variants encoding different isoforms have been found for this gene.
