

COPS8 Antibody (N-term) Blocking Peptide

Synthetic peptide Catalog # BP14987a

Specification

COPS8 Antibody (N-term) Blocking Peptide - Product Information

Primary Accession

Q99627

COPS8 Antibody (N-term) Blocking Peptide - Additional Information

Gene ID 10920

Other Names

COP9 signalosome complex subunit 8, SGN8, Signalosome subunit 8, COP9 homolog, hCOP9, JAB1-containing signalosome subunit 8, COPS8, CSN8

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

COPS8 Antibody (N-term) Blocking Peptide - Protein Information

Name COPS8

Synonyms CSN8

Function

Component of the COP9 signalosome complex (CSN), a complex involved in various cellular and developmental processes. The CSN complex is an essential regulator of the ubiquitin (UbI) conjugation pathway by mediating the deneddylation of the cullin subunits of SCF- type E3 ligase complexes, leading to decrease the UbI ligase activity of SCF-type complexes such as SCF, CSA or DDB2. The complex is also involved in phosphorylation of p53/TP53, c-jun/JUN, lkappaBalpha/NFKBIA, ITPK1 and IRF8/ICSBP, possibly via its association with CK2 and PKD kinases. CSN-dependent phosphorylation of TP53 and JUN promotes and protects degradation by the UbI system, respectively.

Cellular Location

Cytoplasm. Nucleus

COPS8 Antibody (N-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

COPS8 Antibody (N-term) Blocking Peptide - Background

The protein encoded by this gene is one of the eightsubunits of COP9 signalosome, a highly conserved protein complexthat functions as an important regulator in multiple signalingpathways. The structure and function of COP9 signalosome is similar to that of the 19S regulatory particle of 26S proteasome. COP9signalosome has been shown to interact with SCF-type E3 ubiquitinligases and act as a positive regulator of E3 ubiquitin ligases. Alternatively spliced transcript variants encoding distinctisoforms have been observed.
