

#### SIPA1 Antibody (C-term) Blocking Peptide Synthetic peptide

Catalog # BP16989b

## Specification

# SIPA1 Antibody (C-term) Blocking Peptide - Product Information

Primary Accession

#### <u>Q96FS4</u>

## SIPA1 Antibody (C-term) Blocking Peptide - Additional Information

Gene ID 6494

**Other Names** Signal-induced proliferation-associated protein 1, Sipa-1, GTPase-activating protein Spa-1, p130 SPA-1, SIPA1, SPA1

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

**Storage** Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

**Precautions** This product is for research use only. Not for use in diagnostic or therapeutic procedures.

## SIPA1 Antibody (C-term) Blocking Peptide - Protein Information

Name SIPA1

Synonyms SPA1

#### Function

GTPase activator for the nuclear Ras-related regulatory proteins Rap1 and Rap2 in vitro, converting them to the putatively inactive GDP-bound state (PubMed:<a href="http://www.uniprot.org/citations/9346962" target="\_blank">9346962</a>). Affects cell cycle progression (By similarity).

#### **Cellular Location**

Nucleus. Cytoplasm, perinuclear region. Endomembrane system; Peripheral membrane protein. Note=Mostly localized in the perinuclear membraneous region

**Tissue Location** 

Expressed in fetal as well as in adult tissues. Expressed abundantly in the lymphoid tissues such as thymus, spleen and peripheral blood lymphocytes and also shows a significant expression in the spinal cord

## SIPA1 Antibody (C-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

### SIPA1 Antibody (C-term) Blocking Peptide - Background

The product of this gene is a mitogen induced GTPaseactivating protein (GAP). It exhibits a specific GAP activity forRas-related regulatory proteins Rap1 and Rap2, but not for Ran orother small GTPases. This protein may also hamper mitogen-inducedcell cycle progression when abnormally or prematurely expressed. Itis localized to the perinuclear region. Two alternatively splicedvariants encoding the same isoform have been characterized to date.
