

SLC25A3 Antibody (Center) Blocking Peptide
Synthetic peptide
Catalog # BP17106c**Specification**

SLC25A3 Antibody (Center) Blocking Peptide - Product InformationPrimary Accession [Q00325](#)**SLC25A3 Antibody (Center) Blocking Peptide - Additional Information****Gene ID** 5250**Other Names**

Phosphate carrier protein, mitochondrial, Phosphate transport protein, PTP, Solute carrier family 25 member 3, SLC25A3, PHC

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

SLC25A3 Antibody (Center) Blocking Peptide - Protein Information**Name** SLC25A3 {ECO:0000303|PubMed:29237729, ECO:0000312|HGNC:HGNC:10989}**Function**

Inorganic ion transporter that transports phosphate or copper ions across the mitochondrial inner membrane into the matrix compartment (By similarity) (PubMed:17273968, PubMed:29237729). Mediates proton-coupled symport of phosphate ions necessary for mitochondrial oxidative phosphorylation of ADP to ATP (By similarity) (PubMed:17273968). Transports copper ions probably in the form of anionic copper(I) complexes to maintain mitochondrial matrix copper pool and to supply copper for cytochrome C oxidase complex assembly (PubMed:29237729). May also play a role in regulation of the mitochondrial permeability transition pore (mPTP) (By similarity).

Cellular Location

Mitochondrion inner membrane {ECO:0000250|UniProtKB:P12234}; Multi-pass membrane protein {ECO:0000250|UniProtKB:P12234}

SLC25A3 Antibody (Center) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

SLC25A3 Antibody (Center) Blocking Peptide - Background

The protein encoded by this gene catalyzes the transport of phosphate into the mitochondrial matrix, either by proton cotransport or in exchange for hydroxyl ions. The protein contains three related segments arranged in tandem which are related to those found in other characterized members of the mitochondrial carrier family. Both the N-terminal and C-terminal regions of this protein protrude toward the cytosol. Multiple alternatively spliced transcript variants have been isolated.
