NOX1 Antibody (Center) Blocking Peptide - Background

Voltage-gated proton (hydrogen) channels play an importantrole in cellular defense against acidic stress. They are uniqueamong ion channels with respect to their extremely highselectivity, marked temperature dependence, and unitaryconductance, which is 3 orders of magnitude lower than that of mostother ion channels. NOX1 is a homolog of the catalytic subunit of the superoxide-generating NADPH oxidase of phagocytes, gp91phox. Two transcript variants encoding different isoforms have been foundfor this gene.
