

HNRNPR Antibody (N-term) Blocking Peptide Synthetic peptide

Catalog # BP17239a

Specification

HNRNPR Antibody (N-term) Blocking Peptide - Product Information

Primary Accession

<u>043390</u>

HNRNPR Antibody (N-term) Blocking Peptide - Additional Information

Gene ID 10236

Other Names Heterogeneous nuclear ribonucleoprotein R, hnRNP R, HNRNPR, HNRPR

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions This product is for research use only. Not for use in diagnostic or therapeutic procedures.

HNRNPR Antibody (N-term) Blocking Peptide - Protein Information

Name HNRNPR

Synonyms HNRPR

Function

Component of ribonucleosomes, which are complexes of at least 20 other different heterogeneous nuclear ribonucleoproteins (hnRNP). hnRNP play an important role in processing of precursor mRNA in the nucleus.

Cellular Location

Nucleus. Microsome {ECO:0000250|UniProtKB:Q7TMK9}. Nucleus, nucleoplasm. Cytoplasm Note=Localized in cytoplasmic mRNP granules containing untranslated mRNAs. The tyrosine phosphorylated form bound to RNA is found in microsomes (By similarity). {ECO:0000250|UniProtKB:Q7TMK9, ECO:0000269|PubMed:17289661}

HNRNPR Antibody (N-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

HNRNPR Antibody (N-term) Blocking Peptide - Background

This gene belongs to the subfamily of ubiquitouslyexpressed heterogeneous nuclear ribonucleoproteins (hnRNPs). ThehnRNPs are RNA binding proteins and they complex with heterogeneousnuclear RNA (hnRNA). These proteins are associated with pre-mRNAsin the nucleus and appear to influence pre-mRNA processing andother aspects of mRNA metabolism and transport. While all of thehnRNPs are present in the nucleus, some seem to shuttle between thenucleus and the cytoplasm. The hnRNP proteins have distinct nucleicacid binding properties. The protein encoded by this gene has threerepeats of quasi-RRM domains that bind to RNAs and also contains anuclear localization motif. Multiple alternatively splicedtranscript variants have been found for this gene. [provided byRefSeq].
