

TACC1 Antibody (N-term) Blocking Peptide
Synthetic peptide
Catalog # BP17420a**Specification**

TACC1 Antibody (N-term) Blocking Peptide - Product InformationPrimary Accession [O75410](#)**TACC1 Antibody (N-term) Blocking Peptide - Additional Information****Gene ID** 6867**Other Names**

Transforming acidic coiled-coil-containing protein 1, Gastric cancer antigen Ga55, Taxin-1, TACC1, KIAA1103

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

TACC1 Antibody (N-term) Blocking Peptide - Protein Information**Name** TACC1**Synonyms** KIAA1103**Function**

Involved in transcription regulation induced by nuclear receptors, including in T3 thyroid hormone and all-trans retinoic acid pathways (PubMed:20078863). Might promote the nuclear localization of the receptors (PubMed:20078863). Likely involved in the processes that promote cell division prior to the formation of differentiated tissues.

Cellular Location

Cytoplasm. Nucleus. Cytoplasm, cytoskeleton, microtubule organizing center, centrosome. Midbody. Note=Nucleus during interphase. Weakly concentrated at centrosomes during mitosis and colocalizes with AURKC at the midbody during cytokinesis. [Isoform 10]: Cytoplasm

Tissue Location

Isoform 1, isoform 3 and isoform 5 are ubiquitous. Isoform 2 is strongly expressed in the brain, weakly detectable in lung and colon, and overexpressed in gastric cancer. Isoform 4 is not

detected in normal tissues, but strong expression was found in gastric cancer tissues.
Down-regulated in a subset of cases of breast cancer

TACC1 Antibody (N-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

TACC1 Antibody (N-term) Blocking Peptide - Background

This locus may represent a breast cancer candidate gene. It is located close to FGFR1 on a region of chromosome 8 that is amplified in some breast cancers. Three transcript variants encoding different isoforms have been found for this gene.
