**ZNF10 Antibody (N-term) Blocking Peptide - Background**

The protein encoded by this gene contains a C2H2 zincfinger, and has been shown to function as a transcriptional repressor. The Kruppel-associated box (KRAB) domain of this protein is found to be responsible for its transcriptional repression activity. RING finger containing protein TIF1 was reported to interact with the KRAB domain, and may serve as a mediator for the repression activity of this protein.
