

RASA4 Antibody (N-term) Blocking Peptide
Synthetic peptide
Catalog # BP17784a**Specification**

RASA4 Antibody (N-term) Blocking Peptide - Product InformationPrimary Accession [O43374](#)**RASA4 Antibody (N-term) Blocking Peptide - Additional Information****Gene ID** 10156**Other Names**

Ras GTPase-activating protein 4, Calcium-promoted Ras inactivator, Ras p21 protein activator 4, RasGAP-activating-like protein 2, RASA4, CAPRI, GAPL, KIAA0538

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

RASA4 Antibody (N-term) Blocking Peptide - Protein Information**Name** RASA4**Synonyms** CAPRI, GAPL, KIAA0538**Function**

Ca(2+)-dependent Ras GTPase-activating protein, that switches off the Ras-MAPK pathway following a stimulus that elevates intracellular calcium. Functions as an adaptor for Cdc42 and Rac1 during FcR-mediated phagocytosis.

Cellular Location

Cytoplasm, cytosol. Cell membrane; Peripheral membrane protein. Note=Localized to the cytosol as a result of its lack of phosphoinositide binding activity. Upon agonist-stimulated calcium mobilization, utilizes the C2A and C2B domains to associate with the plasma membrane

Tissue Location

Widely expressed..

RASA4 Antibody (N-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

RASA4 Antibody (N-term) Blocking Peptide - Background

This gene encodes a member of the GAP1 family of GTPase-activating proteins that suppresses the Ras/mitogen-activated protein kinase pathway in response to Ca^{2+} . Stimuli that increase intracellular Ca^{2+} levels result in the translocation of this protein to the plasma membrane, where it activates Ras GTPase activity. Consequently, Ras is converted from the active GTP-bound state to the inactive GDP-bound state and no longer activates downstream pathways that regulate gene expression, cell growth, and differentiation. Multiple transcript variants encoding different isoforms have been found for this gene.
