

**AMBRA1 Antibody (N-term) Blocking Peptide**  
**Synthetic peptide**  
**Catalog # BP1826a****Specification**

---

**AMBRA1 Antibody (N-term) Blocking Peptide - Product Information**Primary Accession [O9C0C7](#)**AMBRA1 Antibody (N-term) Blocking Peptide - Additional Information****Gene ID** 55626**Other Names**

Activating molecule in BECN1-regulated autophagy protein 1, AMBRA1, KIAA1736

**Target/Specificity**

The synthetic peptide sequence used to generate the antibody [AP1826a](/product/products/AP1826a) was selected from the N-term region of human AMBRA1. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

**Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

**Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

**Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

**AMBRA1 Antibody (N-term) Blocking Peptide - Protein Information****Name** AMBRA1 {ECO:0000303|PubMed:17589504, ECO:0000312|HGNC:HGNC:25990}**Function**

Substrate-recognition component of a DCX (DDB1-CUL4-X-box) E3 ubiquitin-protein ligase complex involved in cell cycle control and autophagy (PubMed:[20921139](http://www.uniprot.org/citations/20921139), PubMed:[23524951](http://www.uniprot.org/citations/23524951), PubMed:[24587252](http://www.uniprot.org/citations/24587252), PubMed:[32333458](http://www.uniprot.org/citations/32333458), PubMed:[33854232](http://www.uniprot.org/citations/33854232), PubMed:[33854235](http://www.uniprot.org/citations/33854235), PubMed:[33854239](http://www.uniprot.org/citations/33854239)). The DCX(AMBRA1) complex specifically mediates the polyubiquitination of target proteins such as BECN1, CCND1, CCND2, CCND3, ELOC and ULK1 (PubMed:[23524951](http://www.uniprot.org/citations/23524951), PubMed:

[33854232](http://www.uniprot.org/citations/33854232), PubMed: [33854235](http://www.uniprot.org/citations/33854235), PubMed: [33854239](http://www.uniprot.org/citations/33854239)). Acts as an upstream master regulator of the transition from G1 to S cell phase: AMBRA1 specifically recognizes and binds phosphorylated cyclin-D (CCND1, CCND2 and CCND3), leading to cyclin-D ubiquitination by the DCX(AMBRA1) complex and subsequent degradation (PubMed: [33854232](http://www.uniprot.org/citations/33854232), PubMed: [33854235](http://www.uniprot.org/citations/33854235), PubMed: [33854239](http://www.uniprot.org/citations/33854239)). By controlling the transition from G1 to S phase and cyclin-D degradation, AMBRA1 acts as a tumor suppressor that promotes genomic integrity during DNA replication and counteracts developmental abnormalities and tumor growth (PubMed: [33854232](http://www.uniprot.org/citations/33854232), PubMed: [33854235](http://www.uniprot.org/citations/33854235), PubMed: [33854239](http://www.uniprot.org/citations/33854239)). AMBRA1 also regulates the cell cycle by promoting MYC dephosphorylation and degradation independently of the DCX(AMBRA1) complex: acts via interaction with the catalytic subunit of protein phosphatase 2A (PPP2CA), which enhances interaction between PPP2CA and MYC, leading to MYC dephosphorylation and degradation (PubMed: [25438055](http://www.uniprot.org/citations/25438055), PubMed: [25803737](http://www.uniprot.org/citations/25803737)). Acts as a regulator of Cul5-RING (CRL5) E3 ubiquitin- protein ligase complexes by mediating ubiquitination and degradation of Elongin-C (ELOC) component of CRL5 complexes (PubMed: [25499913](http://www.uniprot.org/citations/25499913), PubMed: [30166453](http://www.uniprot.org/citations/30166453)). Acts as a key regulator of autophagy by modulating the BECN1-PIK3C3 complex: controls protein turnover during neuronal development, and regulates normal cell survival and proliferation (PubMed: [21358617](http://www.uniprot.org/citations/21358617)). In normal conditions, AMBRA1 is tethered to the cytoskeleton via interaction with dyneins DYNLL1 and DYNLL2 (PubMed: [20921139](http://www.uniprot.org/citations/20921139)). Upon autophagy induction, AMBRA1 is released from the cytoskeletal docking site to induce autophagosome nucleation by mediating ubiquitination of proteins involved in autophagy (PubMed: [20921139](http://www.uniprot.org/citations/20921139)). The DCX(AMBRA1) complex mediates 'Lys-63'-linked ubiquitination of BECN1, increasing the association between BECN1 and PIK3C3 to promote PIK3C3 activity (By similarity). In collaboration with TRAF6, AMBRA1 mediates 'Lys-63'-linked ubiquitination of ULK1 following autophagy induction, promoting ULK1 stability and kinase activity (PubMed: [23524951](http://www.uniprot.org/citations/23524951)). Also activates ULK1 via interaction with TRIM32: TRIM32 stimulates ULK1 through unanchored 'Lys-63'-linked polyubiquitin chains (PubMed: [31123703](http://www.uniprot.org/citations/31123703)). Also acts as an activator of mitophagy via interaction with PRKN and LC3 proteins (MAP1LC3A, MAP1LC3B or MAP1LC3C); possibly by bringing damaged mitochondria onto autophagosomes (PubMed: [21753002](http://www.uniprot.org/citations/21753002), PubMed: [25215947](http://www.uniprot.org/citations/25215947)). Also activates mitophagy by acting as a cofactor for HUWE1; acts by promoting HUWE1- mediated ubiquitination of MFN2 (PubMed: [30217973](http://www.uniprot.org/citations/30217973)). AMBRA1 is also involved in regulatory T-cells (Treg) differentiation by promoting FOXO3 dephosphorylation independently of the DCX(AMBRA1) complex: acts via interaction with PPP2CA, which enhances interaction between PPP2CA and FOXO3, leading to FOXO3 dephosphorylation and stabilization (PubMed: [30513302](http://www.uniprot.org/citations/30513302)). May act as a regulator of intracellular trafficking, regulating the localization of active PTK2/FAK and SRC (By similarity). Also involved in transcription regulation by acting as a scaffold for protein complexes at chromatin (By similarity).

## Cellular Location

Endoplasmic reticulum. Cytoplasm, cytoskeleton. Cytoplasmic vesicle, autophagosome {ECO:0000250|UniProtKB:A2AH22}. Mitochondrion. Cytoplasm, cytosol {ECO:0000250|UniProtKB:A2AH22}. Nucleus. Cell junction, focal adhesion {ECO:0000250|UniProtKB:A2AH22}. Note=Localizes to the cytoskeleton in absence of autophagy induction (PubMed:20921139). Upon autophagy induction, AMBRA1 relocates to the endoplasmic reticulum to enable autophagosome nucleation (PubMed:20921139). Partially localizes at mitochondria in normal conditions (PubMed:21358617). Also localizes to discrete punctae along the ciliary axoneme (By similarity) {ECO:0000250|UniProtKB:A2AH22, ECO:0000269|PubMed:20921139, ECO:0000269|PubMed:21358617}

### **AMBRA1 Antibody (N-term) Blocking Peptide - Protocols**

Provided below are standard protocols that you may find useful for product applications.

- [Blocking Peptides](#)

### **AMBRA1 Antibody (N-term) Blocking Peptide - Images**

### **AMBRA1 Antibody (N-term) Blocking Peptide - Background**

AMBRA1 regulates autophagy and development of the nervous system. This protein is involved in autophagy in controlling protein turnover during neuronal development, and in regulating normal cell survival and proliferation.
