

GAS2 Antibody (N-term) Blocking Peptide
Synthetic peptide
Catalog # BP18918a**Specification**

GAS2 Antibody (N-term) Blocking Peptide - Product InformationPrimary Accession [O43903](#)**GAS2 Antibody (N-term) Blocking Peptide - Additional Information****Gene ID** 2620**Other Names**

Growth arrest-specific protein 2, GAS-2, GAS2

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

GAS2 Antibody (N-term) Blocking Peptide - Protein Information**Name** GAS2**Function**

May play a role in apoptosis by acting as a cell death substrate for caspases. Is cleaved during apoptosis and the cleaved form induces dramatic rearrangements of the actin cytoskeleton and potent changes in the shape of the affected cells. May be involved in the membrane ruffling process (By similarity).

Cellular Location

Cytoplasm, cytoskeleton, stress fiber. Membrane {ECO:0000250|UniProtKB:P11862}; Peripheral membrane protein {ECO:0000250|UniProtKB:P11862} Note=Component of the microfilament system. Colocalizes with actin fibers at the cell border and along the stress fibers in growth-arrested fibroblasts. Mainly membrane-associated. When hyperphosphorylated, accumulates at membrane ruffles {ECO:0000250|UniProtKB:P11862}

Tissue Location

Ubiquitously expressed with highest levels in liver, lung, and kidney. Not found in spleen

GAS2 Antibody (N-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

GAS2 Antibody (N-term) Blocking Peptide - Background

The protein encoded by this gene is a caspase-3 substrate that plays a role in regulating microfilament and cell shape changes during apoptosis. It can also modulate cell susceptibility to p53-dependent apoptosis by inhibiting calpain activity. Multiple alternatively spliced variants, encoding the same protein, have been identified.
