

SPIB Antibody(C-term) Blocking peptide
Synthetic peptide
Catalog # BP19462b**Specification**

SPIB Antibody(C-term) Blocking peptide - Product InformationPrimary Accession [Q01892](#)**SPIB Antibody(C-term) Blocking peptide - Additional Information****Gene ID** 6689**Other Names**

Transcription factor Spi-B, SPIB

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

SPIB Antibody(C-term) Blocking peptide - Protein Information**Name** SPIB**Function**

Sequence specific transcriptional activator which binds to the PU-box, a purine-rich DNA sequence (5'-GAGGAA-3') that can act as a lymphoid-specific enhancer. Promotes development of plasmacytoid dendritic cells (pDCs), also known as type 2 DC precursors (pre-DC2) or natural interferon (IFN)-producing cells. These cells have the capacity to produce large amounts of interferon and block viral replication. May be required for B-cell receptor (BCR) signaling, which is necessary for normal B-cell development and antigenic stimulation.

Cellular Location

[Isoform 1]: Nucleus

Tissue Location

Expressed in plasmacytoid dendritic cells (pDCs) and B-cells, not expressed in T-cells or granulocytes. May also be enriched in stem cell populations of the liver

SPIB Antibody(C-term) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

SPIB Antibody(C-term) Blocking peptide - Background

SPI1 (MIM 165170) and SPIB are members of a subfamily of ETS (see ETS1; MIM 164720) transcription factors. ETS proteins share a conserved ETS domain that mediates specific DNA binding. SPIB and SPI1 bind to a purine-rich sequence, the PU box (5-prime-GAGGAA-3-prime).
