

## FCER1G Blocking Peptide (C-term)

Synthetic peptide Catalog # BP19903b

## **Specification**

## FCER1G Blocking Peptide (C-term) - Product Information

Primary Accession

Other Accession P20411, Q9XSZ6, P20491, Q8SPW1, Q9BDR7,

NP 004097.1

P30273

## FCER1G Blocking Peptide (C-term) - Additional Information

### **Gene ID 2207**

#### **Other Names**

High affinity immunoglobulin epsilon receptor subunit gamma, Fc receptor gamma-chain, FcRgamma, Fc-epsilon RI-gamma, IgE Fc receptor subunit gamma, FceRI gamma, FCERIG

### Target/Specificity

The synthetic peptide sequence is selected from aa 75-86 of HUMAN FCER1G

#### **Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

#### Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

#### **Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

# FCER1G Blocking Peptide (C-term) - Protein Information

# Name FCER1G

### **Function**

Adapter protein containing an immunoreceptor tyrosine-based activation motif (ITAM) that transduces activation signals from various immunoreceptors. As a component of the high-affinity immunoglobulin E (IgE) receptor, mediates allergic inflammatory signaling in mast cells. As a constitutive component of interleukin-3 receptor complex, selectively mediates interleukin 4/IL4 production by basophils, priming T-cells toward effector T-helper 2 subset. Associates with pattern recognition receptors CLEC4D and CLEC4E to form a functional signaling complex in myeloid cells. Binding of mycobacterial trehalose 6,6'- dimycolate (TDM) to this receptor complex leads to phosphorylation of ITAM, triggering activation of SYK, CARD9 and NF-kappa-B, consequently driving maturation of antigen-presenting cells and shaping antigen- specific priming of T-cells toward effector T-helper 1 and T-helper 17 cell subtypes. May function cooperatively with other activating receptors. Functionally linked to integrin beta-2/ITGB2-mediated neutrophil activation. Also involved in integrin alpha-2/ITGA2-mediated platelet activation.

## **Cellular Location**

Cell membrane; Single-pass type I membrane protein

# FCER1G Blocking Peptide (C-term) - Protocols

Provided below are standard protocols that you may find useful for product applications.

FCER1G Blocking Peptide (C-term) - Images

# FCER1G Blocking Peptide (C-term) - Background

The high affinity IgE receptor is a key molecule involved in allergic reactions. It is a tetramer composed of 1 alpha, 1 beta, and 2 gamma chains. The gamma chains are also subunits of other Fc receptors.
