

### **GFAP Antibody (C-term) Blocking Peptide**

Synthetic peptide Catalog # BP2017b

## **Specification**

## GFAP Antibody (C-term) Blocking Peptide - Product Information

Primary Accession P14136
Other Accession NP\_002046

# GFAP Antibody (C-term) Blocking Peptide - Additional Information

**Gene ID 2670** 

#### **Other Names**

Glial fibrillary acidic protein, GFAP, GFAP

## Target/Specificity

The synthetic peptide sequence used to generate the antibody <a href=/product/products/AP2017b>AP2017b</a> was selected from the C-term region of human GFAP . A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

### **Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

#### Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

#### **Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

### GFAP Antibody (C-term) Blocking Peptide - Protein Information

#### Name GFAP

# **Function**

GFAP, a class-III intermediate filament, is a cell-specific marker that, during the development of the central nervous system, distinguishes astrocytes from other glial cells.

#### **Cellular Location**

Cytoplasm. Note=Associated with intermediate filaments

### **Tissue Location**

Expressed in cells lacking fibronectin.

## GFAP Antibody (C-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

## • Blocking Peptides

# **GFAP Antibody (C-term) Blocking Peptide - Images**

# **GFAP Antibody (C-term) Blocking Peptide - Background**

GFAP is one of the major intermediate filament proteins of mature astrocytes. It is used as a marker to distinguish astrocytes from other glial cells during development. Mutations in this gene cause Alexander disease, a rare disorder of astrocytes in the central nervous system.
