

# UBCH9 Antibody (C-term) Blocking Peptide

Synthetic peptide Catalog # BP2170b

## Specification

# UBCH9 Antibody (C-term) Blocking Peptide - Product Information

Primary Accession

<u>Q969T4</u>

## UBCH9 Antibody (C-term) Blocking Peptide - Additional Information

Gene ID 10477

**Other Names** 

Ubiquitin-conjugating enzyme E2 E3, UbcH9, Ubiquitin carrier protein E3, Ubiquitin-conjugating enzyme E2-23 kDa, Ubiquitin-protein ligase E3, UBE2E3, UBCE4, UBCH9

## Target/Specificity

The synthetic peptide sequence used to generate the antibody <a href=/product/products/AP2170b>AP2170b</a> was selected from the C-term region of human UBCH9 . A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

#### Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

#### UBCH9 Antibody (C-term) Blocking Peptide - Protein Information

Name UBE2E3 (HGNC:12479)

Synonyms UBCE4, UBCH9

Function

Accepts ubiquitin from the E1 complex and catalyzes its covalent attachment to other proteins. In vitro catalyzes 'Lys-11'- and 'Lys-48'-, as well as 'Lys-63'-linked polyubiquitination. Participates in the regulation of transpithelial sodium transport in renal cells.

**Cellular Location** Nucleus. Cytoplasm. Note=Shuttles between the nucleus and cytoplasm in a IPO11-dependent manner

**Tissue Location** 

Ubiquitously expressed at low levels. Highly expressed in skeletal muscle.

## UBCH9 Antibody (C-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

#### UBCH9 Antibody (C-term) Blocking Peptide - Background

The modification of proteins with ubiquitin is an important cellular mechanism for targeting abnormal or short-lived proteins for degradation. Ubiquitination involves at least three classes of enzymes: ubiquitin-activating enzymes, or E1s, ubiquitin-conjugating enzymes, or E2s, and ubiquitin-protein ligases, or E3s. UBCH9 is a member of the E2 ubiquitin-conjugating enzyme family. The encoded protein shares 100% sequence identity with the mouse and rat counterparts, which indicates that this enzyme is highly conserved in eukaryotes. Two alternatively spliced transcript variants encoding the same protein have been found.
