

TRIM55 Blocking Peptide (Center)
Synthetic peptide
Catalog # BP21795c**Specification**

TRIM55 Blocking Peptide (Center) - Product InformationPrimary Accession [Q9BYV6](#)**TRIM55 Blocking Peptide (Center) - Additional Information****Gene ID** 84675**Other Names**

Tripartite motif-containing protein 55, Muscle-specific RING finger protein 2, MuRF-2, MuRF2, RING finger protein 29, TRIM55, MURF2, RNF29

Target/Specificity

The synthetic peptide sequence is selected from aa 315-329 of HUMAN TRIM55

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

TRIM55 Blocking Peptide (Center) - Protein Information**Name** TRIM55**Synonyms** MURF2, RNF29**Function**

E3 ubiquitin ligase that plays an important role in regulating cardiac development and contractility, muscle growth, metabolism, and fiber-type differentiation. Acts as a critical factor that regulates cardiomyocyte size during development in concert with TRIM63 by regulating E2F1-mediated gene expression (By similarity). Plays a role in apoptosis induction in cardiomyocytes by promoting ubiquitination of the DUSP1 phosphatase. Promotes non-canonical NF- κ B signaling and B-cell-mediated immune responses by mediating NFKB2 'Lys-48'-linked ubiquitination and processing. In turn, NFKB2 is further processed by valosin-containing protein/VCP, an ATPase that mediates ubiquitin-dependent protein degradation by the proteasome. May play a role in preventing macrophages from producing inflammatory factors and migrating by downregulating the level of nuclear NF- κ B subunit RELA. Also modifies PPAR γ via polyubiquitination and accelerates PPAR γ proteasomal degradation to inhibit its activity (PubMed: 36737649).

Cellular Location

Nucleus {ECO:0000250|UniProtKB:G3X8Y1}. Cytoplasm {ECO:0000250|UniProtKB:G3X8Y1}.
Note=TLR4 signaling pathway promotes nuclear translocation. {ECO:0000250|UniProtKB:G3X8Y1}

Tissue Location

Highly expressed in muscle. Low-level expression in liver.

TRIM55 Blocking Peptide (Center) - Protocols

Provided below are standard protocols that you may find useful for product applications.
