

TTN Blocking Peptide (N-term)
Synthetic peptide
Catalog # BP21985a**Specification**

TTN Blocking Peptide (N-term) - Product Information

Primary Accession [Q8WZ42](#)
Other Accession [A2ASS6](#)

TTN Blocking Peptide (N-term) - Additional Information

Gene ID 7273

Other Names

Titin, 2.7.11.1, Connectin, Rhabdomyosarcoma antigen MU-RMS-40.14, TTN

Target/Specificity

The synthetic peptide sequence is selected from aa 7189-7203 of HUMAN TTN

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

TTN Blocking Peptide (N-term) - Protein Information

Name TTN

Function

Key component in the assembly and functioning of vertebrate striated muscles. By providing connections at the level of individual microfilaments, it contributes to the fine balance of forces between the two halves of the sarcomere. The size and extensibility of the cross-links are the main determinants of sarcomere extensibility properties of muscle. In non-muscle cells, seems to play a role in chromosome condensation and chromosome segregation during mitosis. Might link the lamina network to chromatin or nuclear actin, or both during interphase.

Cellular Location

Cytoplasm. Nucleus

Tissue Location

Isoforms 3, 7 and 8 are expressed in cardiac muscle. Isoform 4 is expressed in vertebrate skeletal muscle. Isoform 6 is expressed in skeletal muscle (at protein level)

TTN Blocking Peptide (N-term) - Protocols

Provided below are standard protocols that you may find useful for product applications.
