

**NAA10 Blocking Peptide (Center)**  
**Synthetic peptide**  
**Catalog # BP21992c****Specification****NAA10 Blocking Peptide (Center) - Product Information**

Primary Accession [P41227](#)  
Other Accession [Q2KI14](#), [Q9QY36](#)

**NAA10 Blocking Peptide (Center) - Additional Information****Gene ID** 8260**Other Names**

N-alpha-acetyltransferase 10, 2.3.1.-, 2.3.1.88, N-terminal acetyltransferase complex ARD1 subunit homolog A, NatA catalytic subunit Naa10, NAA10, ARD1, ARD1A, TE2

**Target/Specificity**

The synthetic peptide sequence is selected from aa 155-167 of HUMAN NAA10

**Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

**Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

**Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

**NAA10 Blocking Peptide (Center) - Protein Information****Name** NAA10**Synonyms** ARD1, ARD1A, TE2**Function**

Catalytic subunit of N-terminal acetyltransferase complexes which display alpha (N-terminal) acetyltransferase activity (PubMed:<a href="http://www.uniprot.org/citations/15496142" target="\_blank">15496142</a>, PubMed:<a href="http://www.uniprot.org/citations/19826488" target="\_blank">19826488</a>, PubMed:<a href="http://www.uniprot.org/citations/19420222" target="\_blank">19420222</a>, PubMed:<a href="http://www.uniprot.org/citations/20145209" target="\_blank">20145209</a>, PubMed:<a href="http://www.uniprot.org/citations/27708256" target="\_blank">27708256</a>, PubMed:<a href="http://www.uniprot.org/citations/25489052" target="\_blank">25489052</a>, PubMed:<a href="http://www.uniprot.org/citations/29754825" target="\_blank">29754825</a>, PubMed:<a href="http://www.uniprot.org/citations/20154145" target="\_blank">20154145</a>, PubMed:<a href="http://www.uniprot.org/citations/32042062" target="\_blank">32042062</a>). Acetylates amino termini that are devoid of initiator methionine

(PubMed:<a href="http://www.uniprot.org/citations/19420222" target="\_blank">19420222</a>). The alpha (N-terminal) acetyltransferase activity may be important for vascular, hematopoietic and neuronal growth and development. Without NAA15, displays epsilon (internal) acetyltransferase activity towards HIF1A, thereby promoting its degradation (PubMed:<a href="http://www.uniprot.org/citations/12464182" target="\_blank">12464182</a>). Represses MYLK kinase activity by acetylation, and thus represses tumor cell migration (PubMed:<a href="http://www.uniprot.org/citations/19826488" target="\_blank">19826488</a>). Acetylates, and stabilizes TSC2, thereby repressing mTOR activity and suppressing cancer development (PubMed:<a href="http://www.uniprot.org/citations/20145209" target="\_blank">20145209</a>). Acetylates HSPA1A and HSPA1B at 'Lys-77' which enhances its chaperone activity and leads to preferential binding to co-chaperone HOPX (PubMed:<a href="http://www.uniprot.org/citations/27708256" target="\_blank">27708256</a>). Acetylates HIST1H4A (PubMed:<a href="http://www.uniprot.org/citations/29754825" target="\_blank">29754825</a>). Acts as a negative regulator of sister chromatid cohesion during mitosis (PubMed:<a href="http://www.uniprot.org/citations/27422821" target="\_blank">27422821</a>).

**Cellular Location**

Cytoplasm. Nucleus. Note=Also present in the free cytosolic and cytoskeleton-bound polysomes.

**Tissue Location**

Ubiquitous..

**NAA10 Blocking Peptide (Center) - Protocols**

Provided below are standard protocols that you may find useful for product applications.

**NAA10 Blocking Peptide (Center) - Images****NAA10 Blocking Peptide (Center) - Background**

Catalytic subunit of the N-terminal acetyltransferase A (NatA) complex which displays alpha (N-terminal) acetyltransferase activity. The NAT activity may be important for vascular, hematopoietic and neuronal growth and development. Without NAA15, displays epsilon (internal) acetyltransferase activity towards HIF1A, thereby promoting its degradation. Represses MYLK kinase activity by acetylation, and thus represses tumor cell migration. Acetylates, and stabilizes TSC2, thereby repressing mTOR activity and suppressing cancer development.
