

SH3PXD2B Blocking Peptide (C-Term)

Synthetic peptide

Catalog # BP22070b

Specification

SH3PXD2B Blocking Peptide (C-Term) - Product Information

Primary Accession

[A1X283](#)**SH3PXD2B Blocking Peptide (C-Term) - Additional Information**

Gene ID 285590

Other Names

SH3 and PX domain-containing protein 2B, Adapter protein HOFI, Factor for adipocyte differentiation 49, Tyrosine kinase substrate with four SH3 domains, SH3PXD2B, FAD49, KIAA1295, TKS4

Target/Specificity

The synthetic peptide sequence is selected from aa 616-628 of HUMAN SH3PXD2B

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

SH3PXD2B Blocking Peptide (C-Term) - Protein Information

Name SH3PXD2B

Synonyms FAD49, KIAA1295, TKS4

Function

Adapter protein involved in invadopodia and podosome formation and extracellular matrix degradation. Binds matrix metalloproteinases (ADAMs), NADPH oxidases (NOXs) and phosphoinositides. Acts as an organizer protein that allows NOX1- or NOX3-dependent reactive oxygen species (ROS) generation and ROS localization. Plays a role in mitotic clonal expansion during the immediate early stage of adipocyte differentiation (By similarity).

Cellular Location

Cytoplasm. Cell projection, podosome. Note=Cytoplasmic in normal cells and localizes to podosomes in SRC-transformed cells.

Tissue Location

Expressed in fibroblasts.

SH3PXD2B Blocking Peptide (C-Term) - Protocols

Provided below are standard protocols that you may find useful for product applications.
