

# **ART3 Antibody (C-term) Blocking Peptide**

Synthetic peptide Catalog # BP2312b

### **Specification**

## ART3 Antibody (C-term) Blocking Peptide - Product Information

Primary Accession <u>Q13508</u>
Other Accession <u>NP\_001170</u>

## ART3 Antibody (C-term) Blocking Peptide - Additional Information

#### Gene ID 419

#### **Other Names**

Ecto-ADP-ribosyltransferase 3, ADP-ribosyltransferase C2 and C3 toxin-like 3, ARTC3, Mono(ADP-ribosyl)transferase 3, NAD(P)(+)--arginine ADP-ribosyltransferase 3, ART3, TMART

### **Target/Specificity**

The synthetic peptide sequence used to generate the antibody <a href=/product/products/AP2312b>AP2312b</a> was selected from the C-term region of human ART3 . A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

#### **Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

#### Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

### **Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

# ART3 Antibody (C-term) Blocking Peptide - Protein Information

Name ART3

**Synonyms TMART** 

### **Cellular Location**

Cell membrane; Lipid-anchor, GPI-anchor.

#### **Tissue Location**

Testis specific.

## ART3 Antibody (C-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

# ART3 Antibody (C-term) Blocking Peptide - Background

Mono-ADP-ribosylation involves the transfer of the ADP-ribose moiety from NAD+ to a specific amino acid in the target protein. The rodent mono-ADP-ribosyltransferase RT6 is a glycosylphosphatidylinositol (GPI)-anchored membrane protein specifically expressed at the cell surface of rat and mouse T lymphocytes. The predicted 367-amino acid human ART3 protein has an estimated molecular mass of 41.5 kD and contains a hydrophobic peptide signal at its N terminus, 3 consensus motifs specific to enzymes catalyzing ADP-ribose transfer, a hydrophobic C-terminal sequence characteristic of a GPI-anchored protein, a novel motif repeated 3 times at its C terminus, and 1 potential glycosylation site.1 The ART3 and rodent RT6 proteins share 35% amino acid identity.
