

# Ribophorin 2 (RPN2) Antibody (C-term) Blocking peptide

Synthetic peptide Catalog # BP2410b

#### **Specification**

### Ribophorin 2 (RPN2) Antibody (C-term) Blocking peptide - Product Information

Primary Accession P04844
Other Accession NP 002942

### Ribophorin 2 (RPN2) Antibody (C-term) Blocking peptide - Additional Information

#### **Gene ID** 6185

#### **Other Names**

Dolichyl-diphosphooligosaccharide--protein glycosyltransferase subunit 2, Dolichyl-diphosphooligosaccharide--protein glycosyltransferase 63 kDa subunit, RIBIIR, Ribophorin II, RPN-II, Ribophorin-2, RPN2

#### Target/Specificity

The synthetic peptide sequence used to generate the antibody <a href=/product/products/AP2410b>AP2410b</a> was selected from the C-term region of human RPN2 . A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

#### **Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

#### Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

#### **Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

# Ribophorin 2 (RPN2) Antibody (C-term) Blocking peptide - Protein Information

### Name RPN2 (HGNC:10382)

#### **Function**

Subunit of the oligosaccharyl transferase (OST) complex that catalyzes the initial transfer of a defined glycan (Glc(3)Man(9)GlcNAc(2) in eukaryotes) from the lipid carrier dolichol-pyrophosphate to an asparagine residue within an Asn-X-Ser/Thr consensus motif in nascent polypeptide chains, the first step in protein N-glycosylation (PubMed:<a href="http://www.uniprot.org/citations/31831667" target="\_blank">31831667</a>). N-glycosylation occurs cotranslationally and the complex associates with the Sec61 complex at the channel-forming translocon complex that mediates protein translocation across the endoplasmic reticulum (ER). All subunits are required for a maximal enzyme activity.

**Cellular Location** 

Endoplasmic reticulum {ECO:0000250|UniProtKB:F1PCT7}. Endoplasmic reticulum membrane; Multi- pass membrane protein

**Tissue Location** 

Expressed in all tissues tested.

## Ribophorin 2 (RPN2) Antibody (C-term) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

#### Ribophorin 2 (RPN2) Antibody (C-term) Blocking peptide - Background

RNP2 a type I integral membrane protein found only in the rough endoplasmic reticulum. The encoded protein is part of an N-oligosaccharyl transferase complex that links high mannose oligosaccharides to asparagine residues found in the Asn-X-Ser/Thr consensus motif of nascent polypeptide chains. This protein is similar in sequence to the yeast oligosaccharyl transferase subunit SWP1.
