

NMT2 Antibody (C-term) Blocking Peptide
Synthetic peptide
Catalog # BP2412b**Specification**

NMT2 Antibody (C-term) Blocking Peptide - Product Information

Primary Accession [O60551](#)
Other Accession [NMT2_HUMAN](#)

NMT2 Antibody (C-term) Blocking Peptide - Additional Information

Gene ID 9397

Other Names

Glycylpeptide N-tetradecanoyltransferase 2, Myristoyl-CoA:protein N-myristoyltransferase 2, NMT 2, Peptide N-myristoyltransferase 2, Type II N-myristoyltransferase, NMT2

Target/Specificity

The synthetic peptide sequence used to generate the antibody [AP2412b](/product/products/AP2412b) was selected from the C-term region of human NMT2. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

NMT2 Antibody (C-term) Blocking Peptide - Protein Information

Name NMT2 {ECO:0000303|PubMed:9506952, ECO:0000312|HGNC:HGNC:7858}

Function

Adds a myristoyl group to the N-terminal glycine residue of certain cellular and viral proteins (PubMed: [25255805](http://www.uniprot.org/citations/25255805), PubMed: [9506952](http://www.uniprot.org/citations/9506952)). Also able to mediate N-terminal lysine myristoylation of proteins: catalyzes myristoylation of ARF6 on both 'Gly-2' and 'Lys-3' (PubMed: [32103017](http://www.uniprot.org/citations/32103017)). Lysine myristoylation is required to maintain ARF6 on membranes during the GTPase cycle (PubMed: [32103017](http://www.uniprot.org/citations/32103017)).

Cellular Location

Cytoplasm. Membrane; Peripheral membrane protein

NMT2 Antibody (C-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

NMT2 Antibody (C-term) Blocking Peptide - Background

N-myristoyltransferase (NMT) catalyzes the reaction of N-terminal myristoylation of many signaling proteins. It transfers myristic acid from myristoyl coenzyme A to the amino group of a protein's N-terminal glycine residue. Biochemical evidence indicates the presence of several distinct NMTs, varying in apparent molecular weight and /or subcellular distribution. The predicted 498-amino acid of human NMT2 protein shares 77% and 96% sequence identity with human NMT1 and mouse Nmt2 comprise two distinct families of N-myristoyltransferases.
