

PPT2 Antibody (N-term) Blocking Peptide
Synthetic peptide
Catalog # BP2539a

Specification

PPT2 Antibody (N-term) Blocking Peptide - Product Information

Primary Accession [O9UMR5](#)
Other Accession [PPT2_HUMAN](#)

PPT2 Antibody (N-term) Blocking Peptide - Additional Information

Gene ID 9374

Other Names

Lysosomal thioesterase PPT2, PPT-2, 312-, S-thioesterase G14, PPT2

Target/Specificity

The synthetic peptide sequence used to generate the antibody [AP2539a](/product/products/AP2539a) was selected from the N-term region of human PPT2 . A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

PPT2 Antibody (N-term) Blocking Peptide - Protein Information

Name PPT2 ([HGNC:9326](#))

Function

Catalyzes the cleavage of thioester bonds from S-palmitoyl- CoA or S-palmitoyl-N-acetylcysteamine (unbranched structures) but does not have activity against palmitoylcysteine or palmitoylated proteins, branched structures or bulky head groups. Conversely, hydrolyzes both long and short chain fatty acyl-CoA substrate.

Cellular Location

Lysosome.

Tissue Location

Broadly expressed, with highest levels in skeletal muscle.

PPT2 Antibody (N-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

PPT2 Antibody (N-term) Blocking Peptide - Background

PPT2 removes thioester-linked fatty acyl groups from modified cysteine residues in proteins and prefers the acyl groups palmitic and myristic acid over other long-chain acyl substrates. It is a glycosylated lysosomal protein and member of the palmitoyl-protein thioesterase family.
