

#### Aldolase (ALDOA) Antibody (N-term) Blocking peptide Synthetic peptide Catalog # BP2726a

## Specification

# Aldolase (ALDOA) Antibody (N-term) Blocking peptide - Product Information

Primary Accession

## <u>P04075</u>

# Aldolase (ALDOA) Antibody (N-term) Blocking peptide - Additional Information

Gene ID 226

#### **Other Names**

Fructose-bisphosphate aldolase A, Lung cancer antigen NY-LU-1, Muscle-type aldolase, ALDOA, ALDA

## Target/Specificity

The synthetic peptide sequence used to generate the antibody <a

href=/products/AP2726a>AP2726a</a> was selected from the N-term region of human ALDOA. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

#### Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

## Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

**Precautions** This product is for research use only. Not for use in diagnostic or therapeutic procedures.

## Aldolase (ALDOA) Antibody (N-term) Blocking peptide - Protein Information

## Name ALDOA (<u>HGNC:414</u>)

## Synonyms ALDA

## Function

Catalyzes the reversible conversion of beta-D-fructose 1,6- bisphosphate (FBP) into two triose phosphate and plays a key role in glycolysis and gluconeogenesis (PubMed:<a href="http://www.uniprot.org/citations/14766013" target="\_blank">14766013</a>). In addition, may also function as scaffolding protein (By similarity).

## **Cellular Location**

Cytoplasm, myofibril, sarcomere, I band {ECO:0000250|UniProtKB:P00883}. Cytoplasm, myofibril, sarcomere, M line {ECO:0000250|UniProtKB:P00883}. Note=In skeletal muscle, accumulates around the M line and within the I band, colocalizing with FBP2 on both sides of the Z line in the

absence of Ca(2+) {ECO:0000250|UniProtKB:P00883}

# Aldolase (ALDOA) Antibody (N-term) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

## Aldolase (ALDOA) Antibody (N-term) Blocking peptide - Background

Aldolase A (fructose-bisphosphate aldolase) is a glycolytic enzyme that catalyzes the reversible conversion of fructose-1,6-bisphosphate to glyceraldehyde 3-phosphate and dihydroxyacetone phosphate. Three aldolase isozymes (A, B, and C), encoded by three different genes, are differentially expressed during development. Aldolase A is found in the developing embryo and is produced in even greater amounts in adult muscle. Aldolase A expression is repressed in adult liver, kidney and intestine and similar to aldolase C levels in brain and other nervous tissue. Aldolase A deficiency has been associated with myopathy and hemolytic anemia.
