

FZD1 Antibody (C-term) Blocking Peptide Synthetic peptide Catalog # BP2755b

## Specification

# FZD1 Antibody (C-term) Blocking Peptide - Product Information

Primary Accession

<u>Q9UP38</u>

## FZD1 Antibody (C-term) Blocking Peptide - Additional Information

Gene ID 8321

**Other Names** Frizzled-1, Fz-1, hFz1, FzE1, FZD1

### Target/Specificity

The synthetic peptide sequence used to generate the antibody <a href=/products/AP2755b>AP2755b</a> was selected from the C-term region of human FZD1. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

**Storage** Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

### **Precautions** This product is for research use only. Not for use in diagnostic or therapeutic procedures.

# FZD1 Antibody (C-term) Blocking Peptide - Protein Information

Name FZD1

#### Function

Receptor for Wnt proteins (PubMed:<a href="http://www.uniprot.org/citations/10557084" target="\_blank">10557084</a>). Activated by WNT3A, WNT3, WNT1 and to a lesser extent WNT2, but apparently not by WNT4, WNT5A, WNT5B, WNT6, WNT7A or WNT7B (PubMed:<a href="http://www.uniprot.org/citations/10557084" target="\_blank">10557084</a>). Contradictory results showing activation by WNT7B have been described for mouse (By similarity). Functions in the canonical Wnt/beta-catenin signaling pathway (PubMed:<a href="http://www.uniprot.org/citations/10557084" target="\_blank">10557084</a>). The canonical Wnt/beta-catenin signaling pathway (PubMed:<a href="http://www.uniprot.org/citations/10557084" target="\_blank">10557084</a>). The canonical Wnt/beta-catenin signaling pathway leads to the activation of disheveled proteins, inhibition of GSK-3 kinase, nuclear accumulation of beta-catenin and activation of Wnt target genes (PubMed:<a href="http://www.uniprot.org/citations/10557084" target="\_blank">10557084</a>). A second signaling pathway involving PKC and calcium fluxes has been seen for some family members, but it is not yet clear if it represents a distinct pathway

or if it can be integrated in the canonical pathway, as PKC seems to be required for Wnt-mediated inactivation of GSK-3 kinase. Both pathways seem to involve interactions with G-proteins. May be involved in transduction and intercellular transmission of polarity information during tissue morphogenesis and/or in differentiated tissues (Probable).

#### Cellular Location Cell membrane; Multi-pass membrane protein

Tissue Location

Expressed in adult heart, placenta, lung, kidney, pancreas, prostate, and ovary and in fetal lung and kidney

# FZD1 Antibody (C-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

## FZD1 Antibody (C-term) Blocking Peptide - Background

Members of the 'frizzled' proten family are 7-transmembrane domain proteins that are receptors for Wnt signaling proteins. The FZD1 protein contains a signal peptide, a cysteine-rich domain in the N-terminal extracellular region, 7 transmembrane domains, and a C-terminal PDZ domain-binding motif.The FZD1 transcript is expressed in various tissues.
