

Phospho-PRKRA(S246) Antibody Blocking peptide
Synthetic peptide
Catalog # BP3593a**Specification**

Phospho-PRKRA(S246) Antibody Blocking peptide - Product InformationPrimary Accession [O75569](#)**Phospho-PRKRA(S246) Antibody Blocking peptide - Additional Information****Gene ID** 8575**Other Names**

Interferon-inducible double-stranded RNA-dependent protein kinase activator A, PKR-associated protein X, PKR-associating protein X, Protein activator of the interferon-induced protein kinase, Protein kinase, interferon-inducible double-stranded RNA-dependent activator, PRKRA, PACT, RAX

Target/Specificity

The synthetic peptide sequence used to generate the antibody [AP3593a](/products/AP3593a) was selected from the region of human Phospho-PRKRA-pS246. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

Phospho-PRKRA(S246) Antibody Blocking peptide - Protein Information**Name** PRKRA**Synonyms** PACT, RAX**Function**

Activates EIF2AK2/PKR in the absence of double-stranded RNA (dsRNA), leading to phosphorylation of EIF2S1/EIF2-alpha and inhibition of translation and induction of apoptosis. Required for siRNA production by DICER1 and for subsequent siRNA-mediated post-transcriptional gene silencing. Does not seem to be required for processing of pre-miRNA to miRNA by DICER1. Promotes UBC9-p53/TP53 association and sumoylation and phosphorylation of p53/TP53 at 'Lys-386' at 'Ser-392' respectively and enhances its activity in a EIF2AK2/PKR-dependent manner (By similarity).

Cellular Location

Cytoplasm, perinuclear region. Cytoplasm.

Phospho-PRKRA(S246) Antibody Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Blocking Peptides](#)

Phospho-PRKRA(S246) Antibody Blocking peptide - Images**Phospho-PRKRA(S246) Antibody Blocking peptide - Background**

PRKRA appears to have a pro-apoptotic function that may be suppressed in the presence of growth factor. It activates EIF2AK2 in the absence of double-stranded RNA (dsRNA).
