

TECT1 Antibody (Center) Blocking Peptide
Synthetic peptide
Catalog # BP4974c**Specification**

TECT1 Antibody (Center) Blocking Peptide - Product Information

Primary Accession [Q2MV58](#)
Other Accession [NP_001076006](#)

TECT1 Antibody (Center) Blocking Peptide - Additional Information

Gene ID 79600

Other Names

Tectonic-1, TCTN1, TECT1

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

TECT1 Antibody (Center) Blocking Peptide - Protein Information

Name TCTN1

Synonyms TECT1

Function

Component of the tectonic-like complex, a complex localized at the transition zone of primary cilia and acting as a barrier that prevents diffusion of transmembrane proteins between the cilia and plasma membranes. Regulator of Hedgehog (Hh), required for both activation and inhibition of the Hh pathway in the patterning of the neural tube. During neural tube development, it is required for formation of the most ventral cell types and for full Hh pathway activation. Functions in Hh signal transduction to fully activate the pathway in the presence of high Hh levels and to repress the pathway in the absence of Hh signals. Modulates Hh signal transduction downstream of SMO and RAB23 (By similarity).

Cellular Location

Cytoplasm, cytoskeleton, cilium basal body. Secreted. Note=Despite the presence of a signal sequence, the full-length protein might not be secreted Localizes at the transition zone, a region between the basal body and the ciliary axoneme.

TECT1 Antibody (Center) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

TECT1 Antibody (Center) Blocking Peptide - Background

TECT1 encodes a member of the tectonic family of secreted and transmembrane proteins. The orthologous gene in mouse is required for formation of most ventral cell types. It functions downstream of smoothened and rab23 to modulate hedgehog signal transduction.
