OSGEP Antibody (C-term) Blocking peptide - Protein Information**Name** OSGEP {ECO:0000255|HAMAP-Rule:MF_03180, ECO:0000303|PubMed:12039036}**Function**

Component of the EKC/KEOPS complex that is required for the formation of a threonylcarbamoyl group on adenosine at position 37 (t(6)A37) in tRNAs that read codons beginning with adenine. The complex is probably involved in the transfer of the threonylcarbamoyl moiety of threonylcarbamoyl-AMP (TC-AMP) to the N6 group of A37. OSGEP likely plays a direct catalytic role in this reaction, but requires other protein(s) of the complex to fulfill this activity.
