

SIA8C Antibody (C-term) Blocking peptide
Synthetic peptide
Catalog # BP5596b

Specification

SIA8C Antibody (C-term) Blocking peptide - Product Information

Primary Accession [O43173](#)
Other Accession [NP_056963.2](#)

SIA8C Antibody (C-term) Blocking peptide - Additional Information

Gene ID 51046

Other Names

Sia-alpha-2, 3-Gal-beta-1, 4-GlcNAc-R:alpha 2, 8-sialyltransferase, 2499-, Alpha-2, 8-sialyltransferase 8C, Alpha-2, 8-sialyltransferase III, ST8 alpha-N-acetyl-neuraminide alpha-2, 8-sialyltransferase 3, Sialyltransferase 8C, SIAT8-C, Sialyltransferase St8Sia III, ST8SiaIII, ST8SIA3, SIAT8C

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

SIA8C Antibody (C-term) Blocking peptide - Protein Information

Name ST8SIA3 ([HGNC:14269](#))

Synonyms SIAT8C

Function

Catalyzes the transfer of sialic acid from a CMP-linked sialic acid donor onto a terminal alpha-2,3-, alpha-2,6-, or alpha-2,8- linked sialic acid of an acceptor, such as N-linked oligosaccharides of glycoproteins and glycolipids through alpha-2,8-linkages (PubMed: [9826427](http://www.uniprot.org/citations/9826427), PubMed: [26192331](http://www.uniprot.org/citations/26192331), PubMed: [10766765](http://www.uniprot.org/citations/10766765)). Forms oligosialic and polysialic acid on various sialylated N-acetyllactosamine oligosaccharides of glycoproteins, including FETUB N-glycans, a2-HS- glycoprotein (AHSG) and alpha 2,3-sialylated glycosphingolipids, such as alpha 2,3-sialylparagloboside and ganglioside GM3 and to a lesser extent NCAM1 N-glycans (PubMed: [9826427](http://www.uniprot.org/citations/9826427), PubMed: [10766765](http://www.uniprot.org/citations/10766765)). However, it is much more specific to N-linked oligosaccharides

of glycoproteins than glycosphingolipids (By similarity). 2,3-sialylparagloboside serves as the best acceptor substrate among the glycolipids (By similarity).

alpha-Neu5Ac-(2->8)-alpha-Neu5Ac-(2->3)-beta-D-Gal-(1->4)-6S-D-GlcNAc and monosialyl and disialyl N-acetyllactosamines are the best acceptor substrates among glycoproteins (PubMed:26192331, PubMed:10766765). May play a critical role in the striatum by mediating the formation of disialylated and trisialylated terminal glycotopes on N- and O-glycans of specific striatal proteins, regulating their distribution in lipid rafts, affecting their interaction with other binding partners, and subsequently modulating striatal functions (By similarity).

Cellular Location

Golgi apparatus membrane; Single-pass type II membrane protein

Tissue Location

Expressed in fetal and adult brain and fetal liver.

SIA8C Antibody (C-term) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

SIA8C Antibody (C-term) Blocking peptide - Background

ST8SIA3 belongs to a family of sialyltransferases that form sialyl-alpha-2,8-sialyl-R linkages at the nonreducing terminus of glycoconjugates (Lee et al., 1998 [PubMed 9826427]).
