LHFPL3 is a member of the lipoma HMGIC fusion partner(LHFP) gene family, which is a subset of the superfamily oftetraspan transmembrane protein encoding genes. Mutations in oneLHFP-like gene result in deafness in humans and mice, and a secondLHFP-like gene is fused to a high-mobility group gene in atranslocation-associated lipoma. A partial gene fragment namedLHFPL4 corresponds

to a portion of the first exon of this gene.
