

## ABCB5 Antibody (N-term) Blocking Peptide

Synthetic peptide Catalog # BP6122a

## **Specification**

## ABCB5 Antibody (N-term) Blocking Peptide - Product Information

Primary Accession

**Q2M3G0** 

# ABCB5 Antibody (N-term) Blocking Peptide - Additional Information

**Gene ID 340273** 

#### **Other Names**

ATP-binding cassette sub-family B member 5, ABCB5 P-gp, P-glycoprotein ABCB5, ABCB5

#### Target/Specificity

The synthetic peptide sequence used to generate the antibody <a href=/products/AP6122a>AP6122a</a> was selected from the N-term region of human ABCB5. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

#### **Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

#### Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

#### **Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

## ABCB5 Antibody (N-term) Blocking Peptide - Protein Information

# Name ABCB5 (HGNC:46)

#### **Function**

Energy-dependent efflux transporter responsible for decreased drug accumulation in multidrug-resistant cells (PubMed:<a href="http://www.uniprot.org/citations/12960149" target="\_blank">12960149</a>, PubMed:<a href="http://www.uniprot.org/citations/22306008" target="\_blank">22306008</a>, PubMed:<a href="http://www.uniprot.org/citations/15899824" target="\_blank">15899824</a>, PubMed:<a href="http://www.uniprot.org/citations/15205344" target="\_blank">15205344</a>). Specifically present in limbal stem cells, where it plays a key role in corneal development and repair (By similarity).

## **Cellular Location**

Cell membrane; Multi-pass membrane protein {ECO:0000255|PROSITE-ProRule:PRU00441, ECO:0000269|PubMed:12960149}

#### **Tissue Location**

Expressed by CD133-expressing progenitor cells among epidermal melanocytes (at protein level). Widely expressed with specific expression in pigment cells. Highly expressed in several malignant tissues: highly expressed in clinical melanomas, with low expression in normal skin. In melanoma, marks malignant melanoma- initiating cells (MMIC), in which clinical virulence resides as a consequence of unlimited self-renewal capacity, resulting in inexorable tumor progression and metastasis. Also highly expressed in a number of leukemia cells. Expressed in basal limbal epithelium

### ABCB5 Antibody (N-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

## • Blocking Peptides

ABCB5 Antibody (N-term) Blocking Peptide - Images

# ABCB5 Antibody (N-term) Blocking Peptide - Background

ABCB5 belongs to the ATP-binding cassette (ABC) transporter superfamily of integral membrane proteins. These proteins participate in ATP-dependent transmembrane transport of structurally diverse molecules ranging from small ions, sugars, and peptides to more complex organic molecules.
