

# NRG4 Antibody (center) Blocking Peptide

Synthetic peptide Catalog # BP6225b

### **Specification**

## NRG4 Antibody (center) Blocking Peptide - Product Information

**Primary Accession** 

Q8WWG1

# NRG4 Antibody (center) Blocking Peptide - Additional Information

**Gene ID 145957** 

#### **Other Names**

Pro-neuregulin-4, membrane-bound isoform, Pro-NRG4, Neuregulin-4, NRG-4, NRG4

### Target/Specificity

The synthetic peptide sequence used to generate the antibody <a href=/product/products/AP6225b>AP6225b</a> was selected from the center region of human NRG4. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

### **Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

#### Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

#### **Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

# NRG4 Antibody (center) Blocking Peptide - Protein Information

# Name NRG4

### **Function**

Low affinity ligand for the ERBB4 tyrosine kinase receptor. Concomitantly recruits ERBB1 and ERBB2 coreceptors, resulting in ligand-stimulated tyrosine phosphorylation and activation of the ERBB receptors. Does not bind to the ERBB1, ERBB2 and ERBB3 receptors (By similarity).

#### **Cellular Location**

[Pro-neuregulin-4, membrane-bound isoform]: Cell membrane; Single-pass type I membrane protein. Note=Does not seem to be active.

### NRG4 Antibody (center) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

# • Blocking Peptides

# NRG4 Antibody (center) Blocking Peptide - Background

The Pro-neuregulin-4, membrane-bound isoform contains 1 EGF-like domain and belongs to the neuregulin family. It is low affinity ligand for the ERBB4 tyrosine kinase receptor. Concomitantly recruits ERBB1 and ERBB2 coreceptors, resulting in ligand-stimulated tyrosine phosphorylation and activation of the ERBB receptors. However, it does not bind to the ERBB1, ERBB2 and ERBB3 receptors (By similarity).
