

**IL3RB Blocking Peptide (C-term V759)**

Synthetic peptide

Catalog # BP6360b

**Specification**

---

**IL3RB Blocking Peptide (C-term V759) - Product Information**

Primary Accession

[P32927](#)**IL3RB Blocking Peptide (C-term V759) - Additional Information**

Gene ID 1439

**Other Names**

Cytokine receptor common subunit beta, CDw131, GM-CSF/IL-3/IL-5 receptor common beta subunit, CD131, CSF2RB, IL3RB, IL5RB

**Target/Specificity**

The synthetic peptide sequence is selected from aa 759-773 of HUMAN CSF2RB

**Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

**Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

**Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

**IL3RB Blocking Peptide (C-term V759) - Protein Information**

Name CSF2RB

Synonyms IL3RB, IL5RB

**Function**

Cell surface receptor that plays a role in immune response and controls the production and differentiation of hematopoietic progenitor cells into lineage-restricted cells. Acts by forming an heterodimeric receptor through interaction with different partners such as IL3RA, IL5RA or CSF2RA (PubMed:<<http://www.uniprot.org/citations/1495999>>1495999</a>). In turn, participates in various signaling pathways including interleukin-3, interleukin-5 and granulocyte-macrophage colony-stimulating factor/CSF2 pathways. In unstimulated conditions, interacts constitutively with JAK1 and ligand binding leads to JAK1 stimulation and subsequent activation of the JAK- STAT pathway (PubMed:<<http://www.uniprot.org/citations/9516124>>9516124</a>).

**Cellular Location**

Membrane; Single-pass type I membrane protein.

### **IL3RB Blocking Peptide (C-term V759) - Protocols**

Provided below are standard protocols that you may find useful for product applications.

### **IL3RB Blocking Peptide (C-term V759) - Background**

Purified rabbit polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is first purified by protein G affinity chromatography. Then, the antibody fraction is peptide affinity purified in a 2-step procedure with the control and phosphorylated peptides. The phospho-specific antibody is eluted with high and low pH buffers and neutralized immediately, followed by dialysis against PBS.
