

MAP3K7IP1-S423 Antibody Blocking peptide
Synthetic peptide
Catalog # BP6861a**Specification**

MAP3K7IP1-S423 Antibody Blocking peptide - Product InformationPrimary Accession [Q15750](#)**MAP3K7IP1-S423 Antibody Blocking peptide - Additional Information**

Gene ID 10454

Other Names

TGF-beta-activated kinase 1 and MAP3K7-binding protein 1, Mitogen-activated protein kinase kinase kinase 7-interacting protein 1, TGF-beta-activated kinase 1-binding protein 1, TAK1-binding protein 1, TAB1, MAP3K7IP1

Target/Specificity

The synthetic peptide sequence used to generate the antibody [AP6861a](/products/AP6861a) was selected from the region of human MAP3K7IP1-pS423. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

MAP3K7IP1-S423 Antibody Blocking peptide - Protein Information

Name TAB1

Synonyms MAP3K7IP1

Function

Key adapter protein that plays an essential role in JNK and NF-kappa-B activation and proinflammatory cytokines production in response to stimulation with TLRs and cytokines (PubMed: [22307082](http://www.uniprot.org/citations/22307082), PubMed: [24403530](http://www.uniprot.org/citations/24403530)). Mechanistically, associates with the catalytic domain of MAP3K7/TAK1 to trigger MAP3K7/TAK1 autophosphorylation leading to its full activation (PubMed: [10838074](http://www.uniprot.org/citations/10838074), PubMed: [25260751](http://www.uniprot.org/citations/25260751), PubMed: [25260751](http://www.uniprot.org/citations/25260751), PubMed: [25260751](http://www.uniprot.org/citations/25260751)).

[37832545](http://www.uniprot.org/citations/37832545)). Similarly, associates with MAPK14 and triggers its autophosphorylation and subsequent activation (PubMed: [11847341](http://www.uniprot.org/citations/11847341), PubMed: [29229647](http://www.uniprot.org/citations/29229647)). In turn, MAPK14 phosphorylates TAB1 and inhibits MAP3K7/TAK1 activation in a feedback control mechanism (PubMed: [14592977](http://www.uniprot.org/citations/14592977)). Also plays a role in recruiting MAPK14 to the TAK1 complex for the phosphorylation of the TAB2 and TAB3 regulatory subunits (PubMed: [18021073](http://www.uniprot.org/citations/18021073)).

Cellular Location

Cytoplasm, cytosol. Endoplasmic reticulum membrane; Peripheral membrane protein; Cytoplasmic side. Note=Recruited to the endoplasmic reticulum following interaction with STING1

Tissue Location

Ubiquitous..

MAP3K7IP1-S423 Antibody Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

MAP3K7IP1-S423 Antibody Blocking peptide - Images**MAP3K7IP1-S423 Antibody Blocking peptide - Background**

MAP3K7IP1 was identified as a regulator of the MAP kinase kinase kinase MAP3K7/TAK1, which is known to mediate various intracellular signaling pathways, such as those induced by TGF beta, interleukin 1, and WNT-1. This protein interacts and thus activates TAK1 kinase. It has been shown that the C-terminal portion of this protein is sufficient for binding and activation of TAK1, while a portion of the N-terminus acts as a dominant-negative inhibitor of TGF beta, suggesting that this protein may function as a mediator between TGF beta receptors and TAK1. This protein can also interact with and activate the mitogen-activated protein kinase 14 (MAPK14/p38alpha), and thus represents an alternative activation pathway, in addition to the MAPKK pathways, which contributes to the biological responses of MAPK14 to various stimuli.
