

SERPINA3 Antibody (Center) Blocking Peptide
Synthetic peptide
Catalog # BP7314c**Specification**

SERPINA3 Antibody (Center) Blocking Peptide - Product Information

Primary Accession [P01011](#)

SERPINA3 Antibody (Center) Blocking Peptide - Additional Information

Gene ID 12

Other Names

Alpha-1-antichymotrypsin, ACT, Cell growth-inhibiting gene 24/25 protein, Serpin A3, Alpha-1-antichymotrypsin His-Pro-less, SERPINA3, AACT

Target/Specificity

The synthetic peptide sequence used to generate the antibody [AP7314c](/products/AP7314c) was selected from the Center region of human SERPINA3. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

SERPINA3 Antibody (Center) Blocking Peptide - Protein Information

Name SERPINA3

Synonyms AACT

Function

Although its physiological function is unclear, it can inhibit neutrophil cathepsin G and mast cell chymase, both of which can convert angiotensin-1 to the active angiotensin-2.

Cellular Location

Secreted.

Tissue Location

Plasma. Synthesized in the liver. Like the related alpha-1-antitrypsin, its concentration increases in the acute phase of inflammation or infection. Found in the amyloid plaques from the hippocampus

of Alzheimer disease brains.

SERPINA3 Antibody (Center) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

SERPINA3 Antibody (Center) Blocking Peptide - Background

SERPINA3 is a plasma protease inhibitor and member of the serine protease inhibitor class. Polymorphisms in this protein appear to be tissue specific and influence protease targeting. Variations in this protein's sequence have been implicated in Alzheimer's disease, and deficiency of this protein has been associated with liver disease. Mutations have been identified in patients with Parkinson disease and chronic obstructive pulmonary disease.
