

**GIPR Blocking Peptide (Center)**

Synthetic peptide  
Catalog # BP7495c

**Specification**

---

**GIPR Blocking Peptide (Center) - Product Information**

Primary Accession [P48546](#)

**GIPR Blocking Peptide (Center) - Additional Information**

Gene ID 2696

**Other Names**

Gastric inhibitory polypeptide receptor, GIP-R, Glucose-dependent insulintropic polypeptide receptor, GIPR

**Target/Specificity**

The synthetic peptide sequence is selected from aa 119-136 of HUMAN GIPR

**Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

**Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

**Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

**GIPR Blocking Peptide (Center) - Protein Information**

Name GIPR

**Function**

This is a receptor for GIP. The activity of this receptor is mediated by G proteins which activate adenylyl cyclase.

**Cellular Location**

Cell membrane; Multi-pass membrane protein

**GIPR Blocking Peptide (Center) - Protocols**

Provided below are standard protocols that you may find useful for product applications.

### **GIPR Blocking Peptide (Center) - Background**

GIPR also called glucose-dependent insulinotropic polypeptide, is a 42-amino acid polypeptide synthesized by K cells of the duodenum and small intestine. This protein was originally identified as an activity in gut extracts that inhibited gastric acid secretion and gastrin release, but subsequently was demonstrated to stimulate insulin release potently in the presence of elevated glucose. The insulinotropic effect on pancreatic islet beta-cells was then recognized to be the principal physiologic action of GIP. Together with glucagon-like peptide-1, GIP is largely responsible for the secretion of insulin after eating. The protein is involved in several other facets of the anabolic response.
