

MMP21 Antibody (Center) Blocking Peptide

Synthetic peptide Catalog # BP7497c

Specification

MMP21 Antibody (Center) Blocking Peptide - Product Information

Primary Accession

Q8N119

MMP21 Antibody (Center) Blocking Peptide - Additional Information

Gene ID 118856

Other Names

Matrix metalloproteinase-21, MMP-21, 3424-, MMP21

Target/Specificity

The synthetic peptide sequence used to generate the antibody AP7497c was selected from the Center region of human MMP21. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

MMP21 Antibody (Center) Blocking Peptide - Protein Information

Name MMP21

Function

Plays a specialized role in the generation of left-right asymmetry during embryogenesis. May act as a negative regulator of the NOTCH-signaling pathway (PubMed:26429889, PubMed:26437028). Cleaves alpha-1-antitrypsin (PubMed:12617721).

Cellular Location

Secreted.

Tissue Location

Identified in fetal brain, kidney and liver. In adult tissues found primarily in ovary, kidney, liver,

Tel: 858.875.1900 Fax: 858.875.1999

lung, placenta, brain and peripheral blood leukocytes. Expressed as well in various cancer cell lines.

MMP21 Antibody (Center) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

• Blocking Peptides

MMP21 Antibody (Center) Blocking Peptide - Background

MMP21 encodes a member of the matrix metalloproteinase family. Proteins in this family are involved in the breakdown of extracellular matrix for both normal physiological processes, such as embryonic development, reproduction, and tissue remodeling, and disease processes, such as asthma and metastasis. The protein may play an important role in embryogenesis, particularly in neuronal cells, as well as in lymphocyte development and survival.
