

CLK1 Antibody (N-term) Blocking Peptide Synthetic peptide Catalog # BP7529a

Specification

CLK1 Antibody (N-term) Blocking Peptide - Product Information

Primary Accession Other Accession <u>P49759</u> <u>CLK1 HUMAN</u>

CLK1 Antibody (N-term) Blocking Peptide - Additional Information

Gene ID 1195

Other Names Dual specificity protein kinase CLK1, CDC-like kinase 1, CLK1, CLK

Target/Specificity

The synthetic peptide sequence used to generate the antibody AP7529a was selected from the N-term region of human CLK1 . A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions This product is for research use only. Not for use in diagnostic or therapeutic procedures.

CLK1 Antibody (N-term) Blocking Peptide - Protein Information

Name CLK1 (<u>HGNC:2068</u>)

Synonyms CLK

Function

Dual specificity kinase acting on both serine/threonine and tyrosine-containing substrates. Phosphorylates serine- and arginine- rich (SR) proteins of the spliceosomal complex and may be a constituent of a network of regulatory mechanisms that enable SR proteins to control RNA splicing. Phosphorylates: SRSF1, SRSF3 and PTPN1 (PubMed:10480872, PubMed:19168442). Regulates the alternative splicing of tissue factor (F3) pre-mRNA in endothelial cells (PubMed:19168442). Regulates href="http://www.uniprot.org/citations/19168442" target="_blank">19168442).

Cellular Location Nucleus {ECO:0000250|UniProtKB:P22518}.

Tissue Location Endothelial cells..

CLK1 Antibody (N-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

CLK1 Antibody (N-term) Blocking Peptide - Background

This gene encodes a member of the CDC2-like (or LAMMER) family of dual specificity protein kinases. In the nucleus, the encoded protein phosphorylates serine/arginine-rich proteins involved in pre-mRNA processing, releasing them into the nucleoplasm. The choice of splice sites during pre-mRNA processing may be regulated by the concentration of transacting factors, including serine/arginine rich proteins. Therefore, the encoded protein may play an indirect role in governing splice site selection.
