

**MATK Antibody (Center) Blocking Peptide**  
**Synthetic peptide**  
**Catalog # BP7714c****Specification**

---

**MATK Antibody (Center) Blocking Peptide - Product Information**Primary Accession [P42679](#)**MATK Antibody (Center) Blocking Peptide - Additional Information****Gene ID** 4145**Other Names**

Megakaryocyte-associated tyrosine-protein kinase, CSK homologous kinase, CHK, Hematopoietic consensus tyrosine-lacking kinase, Protein kinase HYL, Tyrosine-protein kinase CTK, MATK, CTK, HYL

**Target/Specificity**

The synthetic peptide sequence used to generate the antibody [AP7714c](/product/products/AP7714c) was selected from the Center region of human MATK. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

**Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

**Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

**Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

**MATK Antibody (Center) Blocking Peptide - Protein Information****Name** MATK**Synonyms** CTK, HYL**Function**

Could play a significant role in the signal transduction of hematopoietic cells. May regulate tyrosine kinase activity of SRC- family members in brain by specifically phosphorylating their C-terminal regulatory tyrosine residue which acts as a negative regulatory site. It may play an inhibitory role in the control of T- cell proliferation.

**Cellular Location**

Cytoplasm. Membrane. Note=In platelets, 90% of MATK localizes to the membrane fraction, and translocates to the cytoskeleton upon thrombin stimulation

**Tissue Location**

Expressed in various myeloid cell lines, detected in brain and lung

**MATK Antibody (Center) Blocking Peptide - Protocols**

Provided below are standard protocols that you may find useful for product applications.

**MATK Antibody (Center) Blocking Peptide - Images****MATK Antibody (Center) Blocking Peptide - Background**

MATK has amino acid sequence similarity to Csk tyrosine kinase and has the structural features of the CSK subfamily: SRC homology SH2 and SH3 domains, a catalytic domain, a unique N terminus, lack of myristylation signals, lack of a negative regulatory phosphorylation site, and lack of an autophosphorylation site. This protein is thought to play a significant role in the signal transduction of hematopoietic cells. It is able to phosphorylate and inactivate Src family kinases, and may play an inhibitory role in the control of T-cell proliferation. This protein might be involved in signaling in some cases of breast cancer.
