

APOC3 Antibody (C-term) Blocking Peptide

Synthetic peptide Catalog # BP7797b

Specification

APOC3 Antibody (C-term) Blocking Peptide - Product Information

Primary Accession

<u>P02656</u>

APOC3 Antibody (C-term) Blocking Peptide - Additional Information

Gene ID 345

Other Names Apolipoprotein C-III, Apo-CIII, ApoC-III, Apolipoprotein C3, APOC3

Target/Specificity

The synthetic peptide sequence used to generate the antibody AP7797b was selected from the C-term region of human APOC3. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions This product is for research use only. Not for use in diagnostic or therapeutic procedures.

APOC3 Antibody (C-term) Blocking Peptide - Protein Information

Name APOC3

Function

Component of triglyceride-rich very low density lipoproteins (VLDL) and high density lipoproteins (HDL) in plasma (PubMed:18201179, PubMed:22510806). Plays a multifaceted role in triglyceride homeostasis (PubMed:18201179, PubMed:22510806). Plays a multifaceted role in triglyceride homeostasis (PubMed:22510806). Plays a multifaceted role in triglyceride homeostasis (PubMed:22510806). Plays a multifaceted role in triglyceride homeostasis (PubMed:22510806). Plays a multifaceted role in triglyceride homeostasis (PubMed:22510806). Plays a multifaceted role in triglyceride homeostasis (PubMed:22510806). Intracellularly, promotes hepatic very low density lipoprotein 1 (VLDL1) assembly and secretion; extracellularly, attenuates hydrolysis and clearance of triglyceride- rich lipoproteins (TRLs) (PubMed:22510806). Intracellularly, attenuates hydrolysis and clearance of triglyceride- rich lipoproteins (TRLs) (PubMed:22510806). Impairs the lipolysis of TRLs by inhibiting lipoprotein lipase and the hepatic uptake of TRLs by remnant receptors (PubMed:<a href="http://www.uniprot.org/citations/18201179"

target="_blank">18201179, PubMed:22510806). Formed of several curved helices connected via semiflexible hinges, so that it can wrap tightly around the curved micelle surface and easily adapt to the different diameters of its natural binding partners (PubMed:18408013).

Cellular Location Secreted

Tissue Location Liver..

APOC3 Antibody (C-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

APOC3 Antibody (C-term) Blocking Peptide - Background

Apolipoprotein C-III is a very low density lipoprotein (VLDL) protein. APOC3 inhibits lipoprotein lipase and hepatic lipase; it is thought to delay catabolism of triglyceride-rich particles. The APOA1, APOC3 and APOA4 genes are closely linked in both rat and human genomes. The A-I and A-IV genes are transcribed from the same strand, while the A-1 and C-III genes are convergently transcribed. An increase in apoC-III levels induces the development of hypertriglyceridemia.
