

TBB5 Antibody (N-term) Blocking Peptide

Synthetic peptide Catalog # BP7858a

Specification

TBB5 Antibody (N-term) Blocking Peptide - Product Information

Primary Accession

P07437

TBB5 Antibody (N-term) Blocking Peptide - Additional Information

Gene ID 203068

Other Names

Tubulin beta chain, Tubulin beta-5 chain, TUBB, TUBB5

Target/Specificity

The synthetic peptide sequence used to generate the antibody AP7858a was selected from the N-term region of human TBB5. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

TBB5 Antibody (N-term) Blocking Peptide - Protein Information

Name TUBB

Synonyms TUBB5

Function

Tubulin is the major constituent of microtubules, a cylinder consisting of laterally associated linear protofilaments composed of alpha- and beta-tubulin heterodimers. Microtubules grow by the addition of GTP-tubulin dimers to the microtubule end, where a stabilizing cap forms. Below the cap, tubulin dimers are in GDP-bound state, owing to GTPase activity of alpha-tubulin.

Cellular Location

Cytoplasm, cytoskeleton

Tissue Location

Ubiquitously expressed with highest levels in spleen, thymus and immature brain.

TBB5 Antibody (N-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

• Blocking Peptides

TBB5 Antibody (N-term) Blocking Peptide - Background

Tubulin is the major constituent of microtubules. It binds two moles of GTP, one at an exchangeable site on the beta chain and one at a non-exchangeable site on the alpha-chain.
