

NDUFB4 Antibody (C-term) Blocking Peptide
Synthetic peptide
Catalog # BP8525b**Specification**

NDUFB4 Antibody (C-term) Blocking Peptide - Product InformationPrimary Accession [O95168](#)**NDUFB4 Antibody (C-term) Blocking Peptide - Additional Information****Gene ID** 4710**Other Names**NADH dehydrogenase [ubiquinone] 1 beta subcomplex subunit 4, Complex I-B15, CI-B15,
NADH-ubiquinone oxidoreductase B15 subunit, NDUFB4**Target/Specificity**

The synthetic peptide sequence used to generate the antibody [AP8525b](/products/AP8525b) was selected from the C-term region of human NDUFB4. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

NDUFB4 Antibody (C-term) Blocking Peptide - Protein Information**Name** NDUFB4**Function**

Accessory subunit of the mitochondrial membrane respiratory chain NADH dehydrogenase (Complex I), that is believed not to be involved in catalysis. Complex I functions in the transfer of electrons from NADH to the respiratory chain. The immediate electron acceptor for the enzyme is believed to be ubiquinone.

Cellular Location

Mitochondrion inner membrane; Single-pass membrane protein; Matrix side

NDUFB4 Antibody (C-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

NDUFB4 Antibody (C-term) Blocking Peptide - Background

NDUFB4 is a non-catalytic subunit of the multisubunit NADH:ubiquinone oxidoreductase, the first enzyme complex in the mitochondrial electron transport chain (complex I). Mammalian complex I is composed of 45 different subunits and transfers electrons from NADH to ubiquinone.
