

### FLCN Antibody (C-term) Blocking Peptide

Synthetic peptide Catalog # BP8658b

### **Specification**

## FLCN Antibody (C-term) Blocking Peptide - Product Information

Primary Accession

Q8NFG4

# FLCN Antibody (C-term) Blocking Peptide - Additional Information

**Gene ID 201163** 

#### **Other Names**

Folliculin, BHD skin lesion fibrofolliculoma protein, Birt-Hogg-Dube syndrome protein, FLCN, BHD

### Target/Specificity

The synthetic peptide sequence used to generate the antibody <a href=/products/AP8658b>AP8658b</a> was selected from the C-term region of human FLCN. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

#### **Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

#### Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

#### **Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

## FLCN Antibody (C-term) Blocking Peptide - Protein Information

Name FLCN {ECO:0000303|PubMed:15657874, ECO:0000312|HGNC:HGNC:27310}

#### **Function**

Multi-functional protein, involved in both the cellular response to amino acid availability and in the regulation of glycolysis (PubMed:<a href="http://www.uniprot.org/citations/17028174" target="\_blank">17028174</a>, PubMed:<a href="http://www.uniprot.org/citations/18663353" target="\_blank">18663353</a>, PubMed:<a href="http://www.uniprot.org/citations/21209915" target="\_blank">21209915</a>, PubMed:<a href="http://www.uniprot.org/citations/24081491" target="\_blank">24081491</a>, PubMed:<a href="http://www.uniprot.org/citations/24095279" target="\_blank">24095279</a>, PubMed:<a href="http://www.uniprot.org/citations/31672913" target="\_blank">31672913</a>, PubMed:<a href="http://www.uniprot.org/citations/31704029" target="\_blank">31704029</a>, PubMed:<a href="http://www.uniprot.org/citations/32612235" target="\_blank">32612235</a>, PubMed:<a href="http://www.uniprot.org/citations/34381247" target="\_blank">34381247</a>, PubMed:<a href="http://www.uniprot.org/citations/36103527" target="\_blank">34381247</a>, PubMed:<a href="http://www.uniprot.org/citations/37079666"

response to amino acid availability through regulation of the non-canonical mTORC1 signaling cascade controlling the MiT/TFE factors TFEB and TFE3 (PubMed: <a href="http://www.uniprot.org/citations/17028174" target="\_blank">17028174</a>, PubMed:<a href="http://www.uniprot.org/citations/18663353" target="blank">18663353</a>, PubMed:<a href="http://www.uniprot.org/citations/21209915" target="blank">21209915</a>, PubMed:<a href="http://www.uniprot.org/citations/24081491" target="\_blank">24081491</a>, PubMed:<a href="http://www.uniprot.org/citations/24095279" target="blank">24095279</a>, PubMed:<a href="http://www.uniprot.org/citations/24448649" target="blank">24448649</a>, PubMed:<a href="http://www.uniprot.org/citations/31672913" target="\_blank">31672913</a>, PubMed:<a href="http://www.uniprot.org/citations/31704029" target="\_blank">31704029</a>, PubMed:<a href="http://www.uniprot.org/citations/32612235" target="blank">32612235</a>, PubMed:<a href="http://www.uniprot.org/citations/36103527" target="blank">36103527</a>, PubMed:<a href="http://www.uniprot.org/citations/37079666" target="blank">37079666</a>). Activates mTORC1 by acting as a GTPase-activating protein: specifically stimulates GTP hydrolysis by RagC/RRAGC or RagD/RRAGD, promoting the conversion to the GDP-bound state of RagC/RRAGC or RagD/RRAGD, and thereby activating the kinase activity of mTORC1 (PubMed: <a href="http://www.uniprot.org/citations/24095279" target="\_blank">24095279</a>, PubMed:<a href="http://www.uniprot.org/citations/31672913" target="blank">31672913</a>, PubMed:<a href="http://www.uniprot.org/citations/31704029" target="blank">31704029</a>, PubMed:<a href="http://www.uniprot.org/citations/32612235" target="blank">32612235</a>, PubMed:<a href="http://www.uniprot.org/citations/37079666" target="blank">37079666</a>). The GTPase-activating activity is inhibited during starvation and activated in presence of nutrients (PubMed:<a href="http://www.uniprot.org/citations/31672913" target="\_blank">31672913</a>, PubMed:<a href="http://www.uniprot.org/citations/32612235" target="\_blank">32612235</a>). Acts as a key component for non- canonical mTORC1-dependent control of the MiT/TFE factors TFEB and TFE3, while it is not involved in mTORC1-dependent phosphorylation of canonical RPS6KB1/S6K1 and EIF4EBP1/4E-BP1 (PubMed:<a href="http://www.uniprot.org/citations/21209915" target="\_blank">21209915</a>, PubMed:<a href="http://www.uniprot.org/citations/24081491" target="blank">24081491</a>, PubMed:<a href="http://www.uniprot.org/citations/31672913" target="blank">31672913</a>, PubMed:<a href="http://www.uniprot.org/citations/32612235" target="blank">32612235</a>). In low-amino acid conditions, the lysosomal folliculin complex (LFC) is formed on the membrane of lysosomes, which inhibits the GTPase-activating activity of FLCN, inactivates mTORC1 and maximizes nuclear translocation of TFEB and TFE3 (PubMed: <a href="http://www.uniprot.org/citations/31672913" target=" blank">31672913</a>). Upon amino acid restimulation, RagA/RRAGA (or RagB/RRAGB) nucleotide exchange promotes disassembly of the LFC complex and liberates the GTPase-activating activity of FLCN, leading to activation of mTORC1 and subsequent cytoplasmic retention of TFEB and TFE3 (PubMed: <a href="http://www.uniprot.org/citations/31672913" target=" blank">31672913</a>). Indirectly acts as a positive regulator of Wnt signaling by promoting mTOR-dependent cytoplasmic retention of MiT/TFE factor TFE3 (PubMed:<a href="http://www.uniprot.org/citations/31272105" target=" blank">31272105</a>). Required for the exit of hematopoietic stem cell from pluripotency by promoting mTOR-dependent cytoplasmic retention of TFE3, thereby increasing Wnt signaling (PubMed: <a href="http://www.uniprot.org/citations/30733432" target=" blank">30733432</a>). Acts as an inhibitor of browning of adipose tissue by regulating mTOR-dependent cytoplasmic retention of TFE3 (By similarity). Involved in the control of embryonic stem cells differentiation; together with LAMTOR1 it is necessary to recruit and activate RagC/RRAGC and RagD/RRAGD at the lysosomes, and to induce exit of embryonic stem cells from pluripotency via non-canonical, mTORindependent TFE3 inactivation (By similarity). In response to flow stress, regulates STK11/LKB1 accumulation and mTORC1 activation through primary cilia: may act by recruiting STK11/LKB1 to primary cilia for activation of AMPK resided at basal bodies, causing mTORC1 down- regulation (PubMed:<a href="http://www.uniprot.org/citations/27072130" target="\_blank">27072130</a>). Together with FNIP1 and/or FNIP2, regulates autophagy: following phosphorylation by ULK1, interacts with GABARAP and promotes autophagy (PubMed: <a href="http://www.uniprot.org/citations/25126726" target=" blank">25126726</a>). Required for starvation-induced perinuclear clustering of lysosomes by promoting association of RILP with its

target=" blank">37079666</a>). GTPase-activating protein that plays a key role in the cellular

effector RAB34 (PubMed:<a href="http://www.uniprot.org/citations/27113757" target="\_blank">27113757</a>). Regulates glycolysis by binding to lactate dehydrogenase LDHA, acting as an uncompetitive inhibitor (PubMed:<a href="http://www.uniprot.org/citations/34381247" target=" blank">34381247</a>).

### **Cellular Location**

Lysosome membrane. Cytoplasm, cytosol. Cell projection, cilium. Cytoplasm, cytoskeleton, microtubule organizing center, centrosome. Cytoplasm, cytoskeleton, spindle. Nucleus Note=Localizes to lysosome membrane in amino acid-depleted conditions and relocalizes to the cytosol upon refeeding (PubMed:24095279, PubMed:29848618, PubMed:31672913). Colocalizes with FNIP1 and FNIP2 in the cytoplasm (PubMed:17028174, PubMed:18663353). Also localizes to motile and non-motile cilia, centrosomes and the mitotic spindle (PubMed:23784378).

#### **Tissue Location**

Expressed in most tissues tested, including skin, lung, kidney, heart, testis and stomach.

## FLCN Antibody (C-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

FLCN Antibody (C-term) Blocking Peptide - Images

# FLCN Antibody (C-term) Blocking Peptide - Background

FLCN may play a role in the pathogenesis of an uncommon form of kidney cancer through its association with an inherited disorder of the hair follicle (fibrofolliculomas). FLCN may be a tumor suppressor. May be involved in colorectal tumorigenesis. It may be involved in energy and/or nutrient sensing through the AMPK and mTOR signaling pathways.
