

RPS8 Antibody (N-term) Blocking Peptide
Synthetic peptide
Catalog # BP8831a**Specification**

RPS8 Antibody (N-term) Blocking Peptide - Product Information

Primary Accession [P62241](#)
Other Accession [NP_001003](#)

RPS8 Antibody (N-term) Blocking Peptide - Additional Information

Gene ID 6202

Other Names

40S ribosomal protein S8, RPS8

Target/Specificity

The synthetic peptide sequence used to generate the antibody [AP8831a](/products/AP8831a) was selected from the N-term region of human RPS8. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

RPS8 Antibody (N-term) Blocking Peptide - Protein Information

Name RPS8 ([HGNC:10441](#))

Function

Component of the small ribosomal subunit (PubMed:[23636399](http://www.uniprot.org/citations/23636399)). The ribosome is a large ribonucleoprotein complex responsible for the synthesis of proteins in the cell (PubMed:[23636399](http://www.uniprot.org/citations/23636399)). Part of the small subunit (SSU) processome, first precursor of the small eukaryotic ribosomal subunit. During the assembly of the SSU processome in the nucleolus, many ribosome biogenesis factors, an RNA chaperone and ribosomal proteins associate with the nascent pre-rRNA and work in concert to generate RNA folding, modifications, rearrangements and cleavage as well as targeted degradation of pre-ribosomal RNA by the RNA exosome (PubMed:[34516797](http://www.uniprot.org/citations/34516797)).

Cellular Location

Cytoplasm. Membrane; Lipid-anchor. Nucleus, nucleolus. Note=Localized in cytoplasmic mRNP granules containing untranslated mRNAs.

RPS8 Antibody (N-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

RPS8 Antibody (N-term) Blocking Peptide - Images**RPS8 Antibody (N-term) Blocking Peptide - Background**

Ribosomes, the organelles that catalyze protein synthesis, consist of a small 40S subunit and a large 60S subunit. Together these subunits are composed of 4 RNA species and approximately 80 structurally distinct proteins. RPS8 is a ribosomal protein that is a component of the 40S subunit. The protein belongs to the S8E family of ribosomal proteins. It is located in the cytoplasm.
