

ADAMTS15 Antibody (Center) Blocking Peptide
Synthetic peptide
Catalog # BP9256c**Specification**

ADAMTS15 Antibody (Center) Blocking Peptide - Product InformationPrimary Accession [Q8TE58](#)**ADAMTS15 Antibody (Center) Blocking Peptide - Additional Information****Gene ID** 170689**Other Names**

A disintegrin and metalloproteinase with thrombospondin motifs 15, ADAM-TS 15, ADAM-TS15, ADAMTS-15, 3424-, ADAMTS15

Target/Specificity

The synthetic peptide sequence used to generate the antibody [AP9256c](/products/AP9256c) was selected from the Center region of human ADAMTS15. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

ADAMTS15 Antibody (Center) Blocking Peptide - Protein Information**Name** ADAMTS15**Function**

Metalloprotease which has proteolytic activity against the proteoglycan VCAN, cleaving it at the 'Glu-1428-|-1429-Ala' site. Cleaves VCAN in the pericellular matrix surrounding myoblasts, facilitating myoblast contact and fusion which is required for skeletal muscle development and regeneration.

Cellular Location

Secreted, extracellular space, extracellular matrix {ECO:0000250|UniProtKB:P59384}. Cell surface {ECO:0000250|UniProtKB:P59384}

Tissue Location

Expressed in fetal liver and kidney, but not in any of the adult tissues examined.

ADAMTS15 Antibody (Center) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

ADAMTS15 Antibody (Center) Blocking Peptide - Background

ADAMTS15 encodes a member of the ADAMTS (a disintegrin and metalloproteinase with thrombospondin motifs) protein family. ADAMTS15 family members share several distinct protein modules, including a propeptide region, a metalloproteinase domain, a disintegrin-like domain, and a thrombospondin type 1 (TS) motif. Individual members of this family differ in the number of C-terminal TS motifs, and some have unique C-terminal domains.
