

## INSC Antibody (C-term) Blocking Peptide

Synthetic peptide Catalog # BP9702b

# **Specification**

## INSC Antibody (C-term) Blocking Peptide - Product Information

Primary Accession Q1MX18

Other Accession NP 001027024.3, NP 001036001.1

# INSC Antibody (C-term) Blocking Peptide - Additional Information

Gene ID 387755

#### **Other Names**

Protein inscuteable homolog, INSC

#### **Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

### **Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

#### **Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

### INSC Antibody (C-term) Blocking Peptide - Protein Information

### Name INSC

## **Function**

May function as an adapter linking the Par3 complex to the GPSM1/GPSM2 complex (PubMed:<a href="http://www.uniprot.org/citations/16458856" target="\_blank">16458856</a>). Involved in spindle orientation during mitosis. May regulate cell proliferation and differentiation in the developing nervous system. May play a role in the asymmetric division of fibroblasts and participate in the process of stratification of the squamous epithelium (By similarity).

### **Cellular Location**

Cytoplasm. Cytoplasm, cell cortex. Note=Uniformly distributed in the cytoplasm during interphase. During metaphase, detected in the cell cortex, adjacent to the mitotic spindle poles

### **Tissue Location**

Isoform 1 is expressed in various tissues with stronger expression in liver, kidney and small intestine. Isoform 2 is abundantly expressed in small intestine and to a lower extent in lung and pancreas.

# INSC Antibody (C-term) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

### INSC Antibody (C-term) Blocking Peptide - Background

In Drosophila, neuroblasts divide asymmetrically intoanother neuroblast at the apical side and a smaller ganglion mothercell on the basal side. Cell polarization is precisely regulated by 2 apically localized multiprotein signaling complexes that aretethered by Inscuteable, which regulates their apical localization(Izaki et al., 2006 [PubMed 16458856]).
