14957

Profilin-1 Blocking Peptide - Additional Information

Gene ID 64303

Application & Usage The peptide is used for blocking the

antibody activity of Profilin-1. It usually blocks the antibody activity completely in Western blot analysis by incubating the peptide with equal volume of antibody for

30-60 minutes at 37°C.

Other Names

Profilin-1, Profilin I, Pfn1

Target/Specificity

Profilin-1

Formulation

 $50~\mu g$ (0.5 mg/ml) in phosphate buffered saline (PBS), pH 7.2, containing 50% glycerol, 1% BSA and 0.02% thimerosal.

Reconstitution & Storage

-20 °C

Background Descriptions

Precautions

Profilin-1 Blocking Peptide is for research use only and not for use in diagnostic or therapeutic procedures.

Profilin-1 Blocking Peptide - Protein Information

Name Pfn1

Function

Binds to actin and affects the structure of the cytoskeleton. At high concentrations, profilin prevents the polymerization of actin, whereas it enhances it at low concentrations. By binding to PIP2, it inhibits the formation of IP3 and DG. Inhibits androgen receptor (AR) and HTT aggregation and binding of G-actin is essential for its inhibition of AR (By similarity).

Cellular Location Cytoplasm, cytoskeleton.

Profilin-1 Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- <u>Immunofluorescence</u>
- <u>Immunoprecipitation</u>
- Flow Cytomety
- Cell Culture
